

Useful data for fish farmers

Main benefits for users:

Quality data from all instruments

- Standardisation of data from different sources
- Quality control of real time and historic data
- Flexible and automated reporting

Easy handling of large datasets

- Centralised archive for all data
- Verification of datasets based on standards
- Easy visualisation even of very large data sets

Effective data and observation management

- Comprehensive module for data and instrument administration
- Alerts about maintenance needs of instruments

Prepared for integration with other systems

- Easy export of data
- Web based system

DQ Manager provides the fish farmer quality controlled data about oxygen levels, current, temperature, salinity and other met-ocean parameters. The cost-effective DQ-AquaRealTime and DQ-Verification enables reduction of operational risks and reduces the cost of data administration and reporting.

Distributor for Norway, Chile, Scotland and British Columbia:
