

Cloud Player

By Lazar Pevac

The new Player menu item in CLOUD allows you to playback HS2 data, catalogs of All format, XYZ format and matrix file data.

FIGURE 1. *Cloud Playback*

Instead of displaying whole data set, the program displays one sweep at a time, at the user controlled speed. The playback starts in a separate window with its own menu bar.

FIGURE 2. *The CLOUD Player Tool bar*

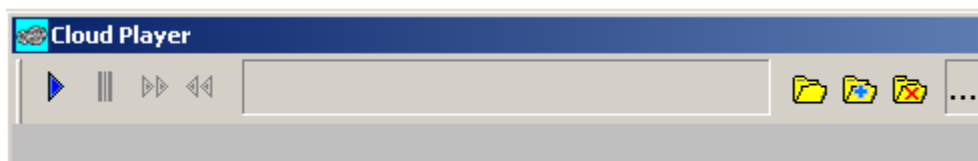

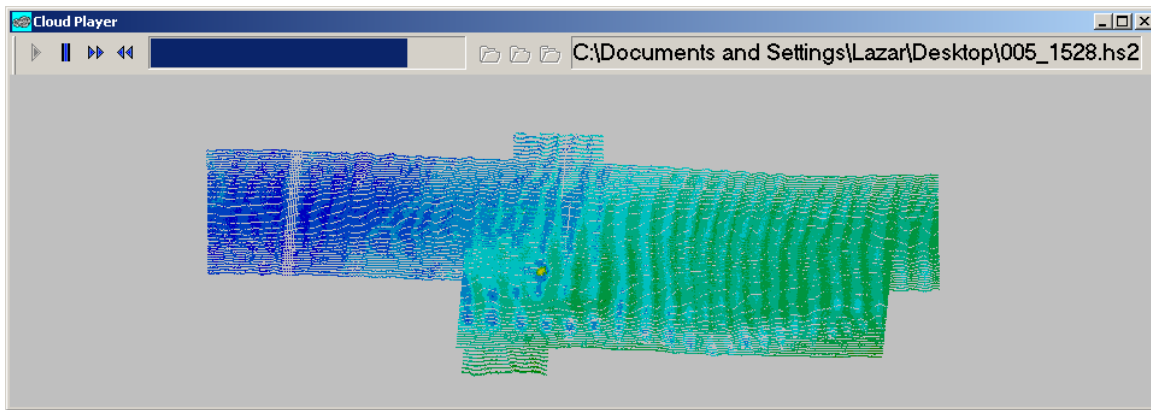

TABLE 1. *Player Icon Functions*

Icon	Function
	open data file(s)
	add data file(s)
	remove all data files
	play
	pause
	speed up
	speed down
The progress bar displays the position within the files, but at the same time, CTRL + mouse will move the position forward or backward.	

FIGURE 3. *CLOUD Player in Action*

During the playback, you can use the same mouse/keyboard actions to navigate the display as in the CLOUD window.

The program will display the data piece by piece because no sweep information is available.
