

HYPACK® 2012 Conference Recap

By Christine Roca

We recently concluded our 2012 HYPACK® Conference in San Diego, which was held from January 29th – February 1st. Accommodations, meeting space, and catering were all provided by The Sheraton San Diego Hotel and Marina. San Diego, as always, did not disappoint offering beautiful weather with ample sunshine all week.

The conference commenced on Sunday with its annual tradition of the Humper Classic Golf Tournament. The participants were treated to a 77° sunny day, which was perfect to kick-off the conference.

San Diego Sheraton Hotel and Marina

Bob Glover, Mike Ferens, Jon Wilson, Pat Sanders

On Monday morning, Pat welcomed all our attendees at the opening session with his presentation on “What’s New in HYPACK® 2012”. We have made several exciting changes to this year’s release including a KEYLESS HYPACK® VIEWER that allows anyone to view HYPACK® data, the ability to process using 32- or 64-bit processors, a Rig Move Driver and Barge Management System capabilities.

To accommodate the needs of both new and long-time users, HYPACK continues to offer separate general training and expert sessions. This allows new users to learn the fundamentals of HYPACK® software in

the general session, while providing long-time users a forum to discuss more advanced topics in the expert sessions.

One-on-one sessions with our expert techs and programmers continue to be an effective means for our attendees to discuss their specific needs and questions. These sessions allow attendees the opportunity to sign up for a 30 minute session with a HYPACK developer or support engineer. We also get many of our development ideas from these sessions!

Our annual HYPACK Conference continues to grow. We want to thank our attendees for their continued support and great development ideas and we hope to see you all again next year!

Lourdes wasn't there this year, but we sure did miss her!
