

XYZ to LAS in the HYPACK® Utility Program

By Harold Orlinsky

The HYPACK® Utility program (HYPACKUtility.exe), part of the 2012 release now allows you to create LAS files from XYZ data. For the initial release, the output is set to version 1.1 of the LAS format. Others will be added as requested.

The header fields have been minimally populated, though I would like feedback from you to see what fields are also needed in the header.

To create this file:

1. Click **[Add]** and select the XYZ files to load to the utility.
2. Select the one or more XYZ files to convert and click **[XYZ to LAS]**. The program creates a LAS file for each XYZ file selected.
