

Left/Right Indicator in HYPACK®2013A

By Rob Baird

There are several new features in HYPACK® 2013a which will help improve your surveying and editing experience. Among the new developments in our mid-year release is the new Left/Right Indicator in HYPACK® SURVEY.

The new Left/Right Indicator in HYPACK® SURVEY displays additional information for the boat operator's viewing ease. In past versions of HYPACK®, the operator could only see their distance right or left of the centerline. (See Figure 1.)

FIGURE 1. Old Left/Right Indicator

In HYPACK® 2013a, the new Left/Right Indicator shows the same distance off-line plus other crucial survey information in the same display. This information was available in past HYPACK® versions, but only in the Data Display and device windows.

As you can see in the following images taken from SURVEY in HYPACK® 2013a, there are now added fields for Distance to the Start and End of Line, Time to the Start and End of Line, Depth (at current position) and Tide.
