

Offset to Target Windows in SURVEY

by John Marinuzzi

In the last edition of *Sounding Better!*, I wrote about a new [Multiple Offsets option in Survey](#). The next step to that option is the ability to track an offset relative to targets. This is done with Offset to Target Windows.

FIGURE 1. *Offsets Window*

In the new Offsets window, there is now a “New Target Window” button. Click this button to display an Options dialog:

FIGURE 2. *Options Dialog*

Here you decide which Offset and Target to track from the drop-down menus and check the data you would like to see in the Offset to Target window. A separate window is created with the data specified.

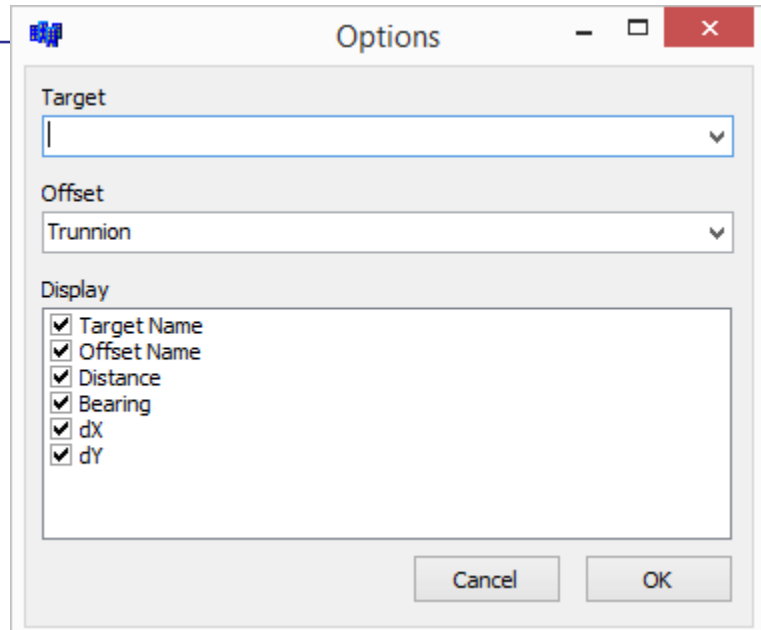

FIGURE 3. Sample Offset to Target Window

Target (2)	
Target:	Target 1
Offset:	Bucket
Distance:	21.52 m
Bearing:	291.45°
dX:	-20.03 m
dY:	7.87 m
