## HYPACK 2018 Mid-Year Build

By John Lindberg

HYPACK® has just released a new HYPACK® 2018 installer. This version is designed to replace the original March release of HYPACK® 2018. While we would typically create an “A” version mid-year (2016a, 2017a), we felt the benefits of an upgraded HYPACK® 2018 outweighed the need to preserve the original release. Many improvements, such as opening HYPACK® in 2D mode and improved drawing of background imagery will benefit current 2018 users!

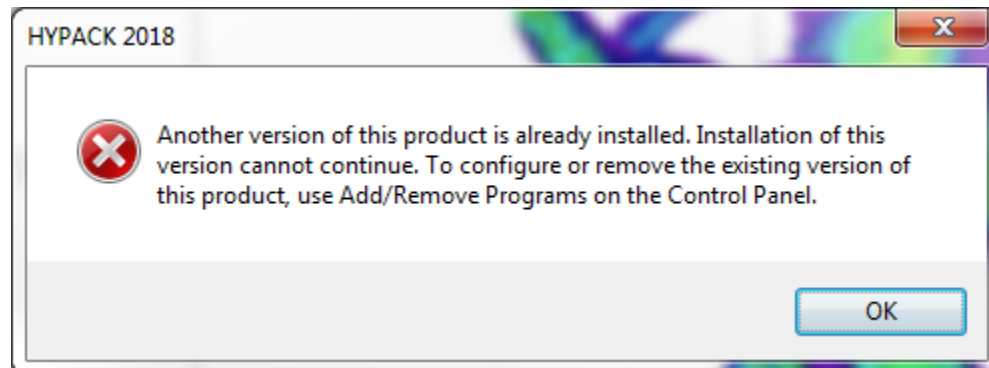

There are a few different installers available. The MSI Installers are full installs, and the ZIP file upgrades your existing HYPACK® 2018 install.

### **MSI INSTALLERS**

For those who have not installed HYPACK® 2018 yet, you have 2 options: the 64-bit and 32-bit \*.msi files. Windows 7 and Windows 10 is available in 32-bit and 64-bit versions. (In the Windows Control Panel, select System and look for “System Type.”) The majority of users have 64-bit Windows machines, so download the 64-bit install. If you are unfortunate to have a 32-bit operating system, do yourself a favor and toss the computer in the trash and get a 64-bit computer! If you really don’t want to do that, download the 32-bit installer while you are ironing your acid-washed jeans and blow drying your mullet. Don’t forget to set your VCR to record ALF.....

**NOTE:** As mentioned earlier, these installers are intended to be installed as a fresh install. They do not require the original HYPACK® 2018.

If you try to install these new versions over the old version you will get the following warning:

Simply go to the Control Panel, uninstall HYPACK® 2018, and run the installer again, or download and install the ZIP file.

---

## ***ZIP FILE***

This update is similar to the “Supplemental Updates” put together by the Support department. Simply download and unzip these files to your current HYPACK® 2018 directory, overwriting the existing files.
