

Monitor Link

SERVER HOSTED SCADA SOFTWARE

6.29

General

Monitor Link is a hosted SCADA application created for small and medium sized installations. The software provides the user with an intuitive SCADA solution, and, at the same time, provides safe back-up and flexible reporting tools.

From a PC, tablet or mobile phone with internet access, configuration, adjustment and monitoring can be performed on many devices such as pumps, level transmitters, data loggers and more.

Set up individual access levels for each user so that one user merely views reports, while other users may adjust pump setups or change various inputs. The user interface will be completely different, making this a very safe application even on more advanced systems.

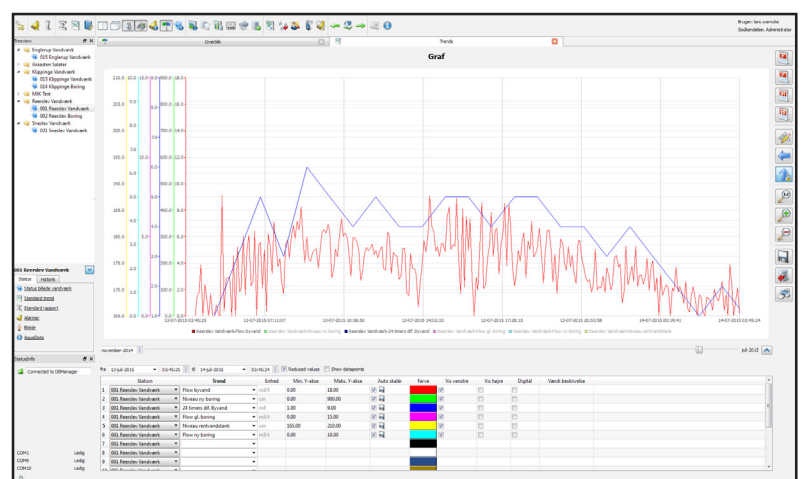

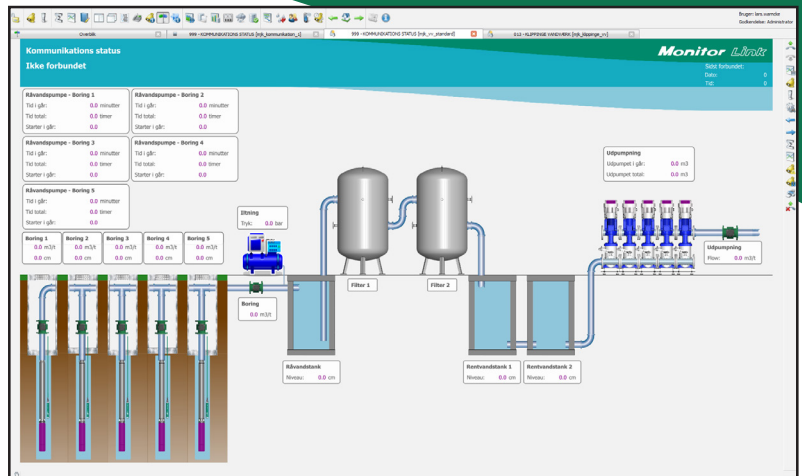

All data, adjustments and configurations will automatically be stored on a server. This server is constantly monitored, serviced and backed-up by MJK Xylem.

Features

- Flexible online SCADA
- Multiuser is standard
- Standard or individual UI
- Graphical yet detailed view in same window
- Real-time data online
- Online operations setup and adjustment
- Export data
- MJK Xylem maintains and backs-up servers.

Application

- Water works: Ground water borings, filters, pumping out, reports, personnel planning module; all data is stored on server
- Fish farms
- Ground water monitoring
- Pump stations
- Waste water facilities
- Industrial installations.
