

Water One[®] Complete Services

Complete services for reliable water management

Xylem's Water One service contracts allow customers to focus on their core business while Xylem takes responsibility for operation and maintenance of their water treatment system.

Outsourcing water treatment operations and maintenance solutions has gained acceptance for good reason: It works. As a tool for industries that utilize water or steam in their operations or that generate wastewater, outsourcing can eliminate operating and expense risks, ensure safe and compliant operations, achieve stable operational costs, and maximize the life and efficiency of your operating water or wastewater systems.

With the vast array of technologies and treatment solutions available today, more and more businesses are turning to Xylem to operate and maintain their water and wastewater treatment systems. Utilizing a proven holistic approach, we will evaluate your operation from a system-wide perspective, then provide a custom-tailored full service solution.

Xylem will reduce the financial and operational uncertainty of managing your water

We know that your focus is to safely, efficiently and profitably produce quality products. We can help you do that through our core competency, the management of water, wastewater, utilities and related assets. Allowing Xylem to be your single-source treated water solution provider will enable you to apply more time and resources toward your company's core competencies and those assets that improve your overall financial performance.

Benefits of Water One CS

- All inclusive service agreement
- Guarantee quality & quantity
- Maximize system uptime & operational efficiency
- Operating safely & in compliance

Water One CS from Xylem enables you to outsource your water-related operations and maintenance requirements. We'll shoulder the risks of operating and maintaining your water facility and enhance its performance. Your control is always ensured through carefully constructed contracts that allow for operational changes in influent/effluent quality and volume based on regulatory demands or the strategic needs of your business.

Achieving consistent water quality and quantity is a complex task that begins by allowing Xylem to operate and maintain your water treatment system

Working with your plant and process technical staff, our field sales and service personnel begin with a site and process evaluation to develop a full service solution customized to your system and operational requirements. Our detailed survey is normally completed within a single on-site visit and includes:

- Determine the system condition, required maintenance, repairs or upgrades to ensure water quality and production rates
- Develop the required maintenance services and contracted materials for the life of contract
- Familiarize our service personnel with your safety protocol
- Sample and analyze your feed water quality
- Review current operation logs and chemical costs
- Evaluate the addition of remote process and alarm monitoring

Operating your system safely, efficiently, and reliably will be top priority for Xylem

From intake to outfall, we serve all industries that utilize water and generate wastewater in their processes, including automotive, metal, HPI/CPI, power, pulp and paper, food and beverage, microelectronics, pharmaceutical/biotech, medical research, and life science systems.
