

C0. Introduction

C0.1

(C0.1) Give a general description and introduction to your organization.

Xylem, with 2019 revenue of \$5.25 billion and approximately 16,000 diverse employees, is a leading global water technology company committed to solving critical water and infrastructure challenges with technological innovation. We are creating a more sustainable world by enabling our customers to optimize water and resource management, and helping communities in more than 150 countries become water-secure.

We design, manufacture and service highly engineered products and solutions ranging across a wide variety of critical applications, primarily in the water sector, but also in electric and gas. Our broad portfolio of products, services and solutions addresses customer needs across the water cycle, from the delivery, measurement and use of drinking water to the collection, test and treatment of wastewater to the return of water to the environment. We have differentiated market position in core application areas including transport, treatment, test, smart metering, smart infrastructure, analytics, digital solutions, condition assessment and leak detection, building services and industrial processing.

Xylem is headquartered in Rye Brook, New York, and manufactures and assembles products in 22 countries, operates in more than 50 countries and sells services and solutions in more than 150 countries through a balanced distribution network consisting of our direct sales force and independent channel partners. Our product, services and solutions offerings are organized into three reportable segments that are aligned around the critical market applications they provide: Water Infrastructure, Applied Water and Measurement & Control Solutions.

The name Xylem is derived from classical Greek referring to the tissue that transports water in plants, highlighting the engineering efficiency of our water-centric business by linking it with the best water transportation of all – that which occurs in nature.

C0.2

(C0.2) State the start and end date of the year for which you are reporting data.

	Start date	End date	Indicate if you are providing emissions data for past reporting years	Select the number of past reporting years you will be providing emissions data for
Reporting year	January 1 2019	December 31 2019	Yes	1 year

(C0.4) Select the currency used for all financial information disclosed throughout your response.

- USD

C0.5

(C0.5) Select the option that describes the reporting boundary for which climate-related impacts on your business are being reported. Note that this option should align with your chosen approach for consolidating your GHG inventory.

- Operational control

C1. Governance

C1.1

(C1.1) Is there board-level oversight of climate-related issues within your organization?

- Yes

C1.1a

(C1.1a) Identify the position(s) (do not include any names) of the individual(s) on the board with responsibility for climate-related issues.

Position of individual(s)	Please explain
Board Chair	The Xylem Board of Directors is led by an independent Chair, allowing our CEO to focus on running the company's day-to-day operations. The Board believes that this leadership structure strengthens the Board's role in risk oversight of the company, including the risks and opportunities related to climate change and water. The Board provides oversight of our sustainability strategy and oversees management's approach to risk management and execution of its risk management responsibilities. The Board has delegated responsibility for oversight of certain risk categories to designated Board Committees based on each Committee's expertise; each Committee regularly receives updates on this matters from management and reports on them to the full Board. The Audit & Finance Committee oversees the company's overall risk assessment and risk management processes and policies as well as accounting, controls and financial disclosures. The Board's Nominating & Governance Committee is responsible for overseeing risks related to sustainability, business continuity and disaster recovery, and environmental, health and safety, along with related activities. Both Committees and the full Board discuss climate- and water-related issues with management on an ongoing basis. We review our business strategy with our Board during our annual strategy meeting and then again 2-3 times per year. We develop our business and sustainability strategy through the lens of resiliency against climate change, water scarcity and water affordability. Climate and water-related risks are part of our regular strategy discussions with the Board. When we review our manufacturing and supply chain strategy, sustainability and footprint management are included in those discussions. Innovation & Technology reviews our technology and innovation strategy including reducing the climate impact of our pumping and treatment technologies. Nominating & Governance reviews our sustainability strategy and performance against our goals, many of which consider climate and water risks, such as investing further in digitization to expand our leading position in the smart water sector, at least annually.

C1.1b

(C1.1b) Provide further details on the board's oversight of climate-related issues.

Frequency with which climate-related issues are a scheduled agenda item	Governance mechanisms into which climate-related issues are integrated	Scope of board-level oversight	Please explain
Scheduled – some meetings	<ul style="list-style-type: none"> Reviewing and guiding strategy Reviewing and guiding major plans of action Reviewing and guiding risk management policies Setting performance objectives Monitoring implementation and performance of objectives Overseeing major capital expenditures, acquisitions and divestitures Monitoring and overseeing progress against goals and targets for addressing climate-related issues 	<Not Applicable>	As a water technology company, Xylem's long-term business objectives hinge on the understanding and planning for macro-economic trends regarding water and climate issues. Our business strategy, including M&A, risk management, reputation, and R&D are intricately linked to climate- and water-related issues. The Board of Directors provides oversight of our strategy and oversees our risk management processes and policies. The Board has delegated certain responsibilities to designated Board Committees that report back to the full Board. Water- and climate-related issues are addressed by the full Board, as well as the following Xylem Board Committees: <ul style="list-style-type: none"> • Audit & Finance monitors Xylem's overall risk assessment and risk management program. Climate risks are considered in risk analyses; • Nominating & Governance reviews Xylem's sustainability; business continuity and disaster recovery; and environmental, safety, health and security programs, • Innovation & Technology oversees Xylem's capital expenditure, acquisitions, technology and innovation goals; tracks R&D productivity and potential impacts on the company in events that technology is not developed. Xylem's current and forthcoming product lines are all related to climate and realized or potential climate-related issues that we can solve for our customers and the world. All Committees regularly report their activities to the full Board. Committees and the full Board discuss climate- and water-related issues with management on an on-going basis.

C1.2

(C1.2) Provide the highest management-level position(s) or committee(s) with responsibility for climate-related issues.

Name of the position(s) and/or committee(s)	Reporting line	Responsibility	Coverage of responsibility	Frequency of reporting to the board on climate-related issues
Chief Executive Officer (CEO)	<Not Applicable>	Both assessing and managing climate-related risks and opportunities	<Not Applicable>	Quarterly

C1.2a

(C1.2a) Describe where in the organizational structure this/these position(s) and/or committees lie, what their associated responsibilities are, and how climate-related issues are monitored (do not include the names of individuals).

Sustainability isn't just an initiative at Xylem; it's our core business strategy, and it drives our employees to come to work each day with a common purpose and passion – to redefine and advance the world's water systems and, in doing so, to improve the lives of people around the globe. As the world's climate changes, water issues are intensifying around the globe – demanding new and bold solutions. For Xylem, the planet's climate-related water challenges provide opportunities for us to address and overcome them.

Our senior leadership team members, under the direction of our President and CEO, lead businesses, sales teams and functional areas with the intent of building an enduring and successful company in service to customers and communities. Increasingly, our businesses are better integrating sustainability – such as climate change mitigation and adaptation solutions – into their strategies to accelerate innovation, sell our products and services, and grow our business. Ultimately, our growth strategies are designed to position Xylem as a leader in the global water technology industry, enabling customers to increase their resiliency against climate change and to optimize their water and resource management for the communities around them. Our CEO, has ultimate responsibility for aligning Xylem's long-term business strategy with climate-driven market conditions in the water technology industry.

Our CEO's approach to climate-related issues is informed by Xylem's Climate Change Policy, which defines our climate change approach across product development, operations, employees and external engagement. This approach is also applied to our M&A strategy, which is led by our CEO and focused on key growth areas that can further advance our ability to have a positive impact on climate-related issues. For example, in the past two years, we have completed several acquisitions in the broad category of systems intelligence, bringing best-in-class advanced metering infrastructure, advanced data analytics and software development capabilities to our portfolio. We are also focused on increasing our capabilities in the areas of advanced industrial water treatment and industrial water services.

Our CEO leads our business strategy review with our Board during our annual strategy meeting and then again 2-3 times per year. Our CEO develops our business and sustainability strategy through the lens of resiliency against climate change, water scarcity and water affordability. Climate and water related risks are part of our regular strategy discussions with the board. When we review our manufacturing and supply chain strategy, sustainability and footprint management are included in those discussions. Innovation & Technology reviews our technology and innovation strategy including reducing the climate impact of our pumping and treatment technologies. Nominating & Governance reviews our sustainability strategy and performance against our goals, many of which consider climate and water risks, at least annually.

C1.3

(C1.3) Do you provide incentives for the management of climate-related issues, including the attainment of targets?

	Provide incentives for the management of climate-related issues	Comment
Row 1	Yes	

C1.3a

(C1.3a) Provide further details on the incentives provided for the management of climate-related issues (do not include the names of individuals).

Entitled to incentive	Type of incentive	Activity incentivized	Comment
Corporate executive team	Monetary reward	Efficiency target	At Xylem, sustainability is at the very center of who we are and what we do. As a leading global water technology company, we deal with one of the world's most urgent sustainability issues on a daily basis - responsible stewardship of our shared water resources. We believe that technology is a key link in how the world can solve water. We're focusing on the powerful capabilities of smart technology, integrated management and big data. These solutions will allow us to transport, treat, test and use water smarter - and more sustainably - than in the past. A significant portion of our executive pay is performance-based and not guaranteed. 75% of our corporate executive team's annual incentive compensation is tied to revenue growth, operating income growth and working capital improvements, weighted equally. Revenue growth means that we are successful in selling more of our green/sustainable products and solutions. Operating income improvements means that we are thoughtful about our costs, including energy costs. Our energy treasure hunts routinely contribute to our operating income performance. In 2019, our top strategic priorities included: Continued Growth Culture and Customer Solution Provider, Execute the One Company Roadmap, Drive Business Simplification and Continued Continuous Improvement Culture, Improve Safety and Cultivate Leadership and Talent Development. Our Sustainability Goals, such as Increase Our Vitality Index to 30% by 2020 to drive product innovation and efficiency, fall under these top strategic priorities, and therefore are connected to our CEO and NEO performance-based pay.
All employees	Non-monetary reward	Energy reduction target	We're making significant progress, from identifying our highest-emitting activities to engaging employees across our company to adopt a more energy-efficient mindset—all of which will help move us closer to achieving our GHG intensity goal. Some of our most successful initiatives to engage employees in energy-reduction efforts have been "Energy Treasure Hunts" at selected facilities. During these events, cross-functional teams of employees identify possible day-to-day energy efficiency improvements. The goal is to find opportunities to reduce energy use, costs and greenhouse gas emissions related to energy. Treasure Hunts were conducted at 20 Xylem sites around the world in 2019, starting with our highest resource-consuming facilities. Through GenSuite, we determined that in 2019, these efforts have led to 62 recommended projects, 52 percent of which are underway. These projects are expected to avert 406 tons of CO2 emissions and save 601,000 kilowatt hours. Non-monetary incentives such as Xylem-logoed shirts and novelty items, pizza parties and cookouts are given to employees in recognition for participation in Sustainability and Health & Safety initiatives like the Energy Treasure Hunts.

C2. Risks and opportunities

C2.1

(C2.1) Does your organization have a process for identifying, assessing, and responding to climate-related risks and opportunities?

Yes

C2.1a

(C2.1a) How does your organization define short-, medium- and long-term time horizons?

	From (years)	To (years)	Comment
Short-term	0	3	
Medium-term	3	5	
Long-term	5	10	

C2.1b

(C2.1b) How does your organization define substantive financial or strategic impact on your business?

Xylem defines a substantive financial impact or strategic impact as anything within our direct operations, supply chain, or value chain that stands to impact 4% or more of Xylem's overall annual revenue.

C2.2

(C2.2) Describe your process(es) for identifying, assessing and responding to climate-related risks and opportunities.

Long-term

Description of process

We conduct robust risk assessments to gauge possible risk factors facing our business, from issues such as supply chain disruptions, damages or disturbances to IT and adverse economic conditions. A disclosure of risk factors is available in our annual 10-K filing. Our enterprise risk management (ERM) document is reviewed by top executives and our board on a semi-annual basis, and includes feedback gleaned from a) a survey of the company's top 120 leaders and b) periodic risk interviews conducted of "Risk Owners", the individuals with executive responsibility for managing the enterprises' top 31 risks. We are also taking a forward-looking and proactive approach to risk avoidance in key areas throughout our company through business continuity planning, IT disaster recovery planning, IT protection systems, emergent risk evaluations, updates of our EHS program and through performance-based incentives to deter excessive risk-taking. Xylem's risks, including climate- and water-related risks, are managed through a comprehensive ERM Program with a 5-part framework: Risk Appetite & Strategy, Governance & Organization, Policies and Procedures, Risk Management Process, and Monitoring & Reporting. The Program establishes practical and sustainable policies, procedures and processes that help the Company monitor, govern, prioritize and manage risk effectively. Xylem's ERM Program includes an annual Enterprise Risk Assessment, in which we identify, measure and categorize strategic, operational, financial and reputational risks in the Company and business segments that could impact our ability to meet our strategic objectives and impede our business resilience. Each risk is then assigned a score for a) severity of impact, b) likelihood of occurring, c) preparedness of controls / vulnerabilities, and d) speed of onset, and placed on a heat map to understand its relative importance. Each risk is assigned a ranking of either primary or secondary. Risks are tracked on a monitoring dashboard that cascades primary and secondary risks and specifies who owns each risk. The dashboard denotes primary risks as high, moderate or minimal. Primary risks are reviewed and updated quarterly to determine how each primary risk's residual risk has changed (increase, decrease or no change). New primary risks may be added during this quarterly review. When identifying or assessing climate-related risks, Xylem defines a substantive financial impact as anything within our direct operations, supply chain, or value chain that stands to impact 4% or more of Xylem's overall annual revenue. The ERM Program is led by an Enterprise Risk Committee (ERC), chaired by Xylem's Vice President, Chief Corporate Counsel and Assistant Corporate Secretary and which includes the CFO, General Counsel and executives from Treasury, Risk Management, Legal, Finance, Operations, Marketing and IT. The VP of Internal Audits has a standing invites. The ERC's responsibilities include: a) establishing and maintaining the risk management framework, b) ensuring that all critical risks are identified and managed on an ongoing basis, c) reviewing the results of the annual Enterprise Risk Assessment, d) fostering a risk management culture and discipline necessary to achieve the Company's objectives, e) defining the organization's risk profile based on the results of the annual Risk Assessment and the Company's strategic objectives, and f) scanning the Company's ecosystem to identify emerging risks. Risks are considered more than six years into the future. Xylem's ERM Program is audited by the Internal Audit Department, which reviews the Program and its effectiveness, and tests selected risks. The ERC reports findings and status of risks to Xylem's Senior Leadership Team, Audit Committee and Board of Directors, who have ultimate oversight and responsibility for risk assessment, management processes and policies.

C2.2a

(C2.2a) Which risk types are considered in your organization's climate-related risk assessments?

	Relevance & inclusion	Please explain
Current regulation	Relevant, always included	Our manufacturing operations worldwide are subject to many requirements under environmental laws. In the United States, the Environmental Protection Agency and similar state agencies administer laws and regulations concerning air emissions, water discharges, waste disposal, environmental remediation, and other aspects of environmental protection. Such environmental laws and regulations in the United States include, for example, the federal Clean Air Act (CAA), the Clean Water Act, the Resource, Conservation and Recovery Act (RCRA), and the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). Environmental requirements significantly affect our operations. We have established an internal program to address global compliance with applicable environmental requirements. Compliance risk is considered as part of our semiannual ERM process, as described in C2.2.
Emerging regulation	Relevant, always included	Unforeseen environmental issues could impact our financial position or results of operations. Our operations and products and offerings are subject to and affected by many federal, state, local and foreign environmental laws and regulations. In addition, we could be affected by future environmental laws or regulations, including, for example, those imposed in response to climate change concerns. Compliance with current and future environmental laws and regulations currently require and is expected to continue to require operating and capital expenditures. Environmental laws and regulations may authorize substantial fines and criminal sanctions as well as facility shutdowns to address violations and may require the installation of costly pollution control equipment or operational changes to limit emissions or discharges. We also incur, and expect to continue to incur, costs to comply with current environmental laws and regulations. Developments such as the adoption of new environmental laws and regulations, stricter enforcement of existing laws and regulations, violations by us of such laws and regulations, discovery of previously unknown or more extensive contamination, litigation involving environmental impacts, our inability to recover costs associated with any such developments, or financial insolvency of other responsible parties could in the future have a material adverse effect on our financial position and results of operations. Due to the nature of these risk, as described here, risk associated with emerging regulation is always included in our ERM process, as described in C2.2.
Technology	Relevant, always included	Our competitors or third parties from outside of our industry may develop disruptive technologies or products that are superior to our products or may develop more efficient or effective methods of providing products and services or may adapt more quickly than we do to new technologies or evolving customer requirements. The failure of our technologies or products to maintain and gain market acceptance due to more attractive offerings could significantly reduce our revenues and adversely affect our competitive standing and prospects. Pricing pressures also could cause us to adjust the prices of certain products to stay competitive, which could adversely affect our financial performance. Failure to continue competing successfully or to win large contracts could adversely affect our business, financial condition or results of operations. Additionally, a significant portion of our products and offerings in our Measurement & Control Solutions segment are affected by the availability and regulation of radio spectrum. Accordingly, if the FCC does not renew our existing spectrum licenses, our business could be adversely affected. As these risks have significant and fundamental impact on our profitability and ability to compete technology risk is always included in our ERM process, as described in C2.2. For example, a significant portion of our products and offerings in our Measurement & Control Solutions segment are affected by the availability and regulation of radio spectrum. Accordingly, if the FCC does not renew our existing spectrum licenses, our business could be adversely affected.
Legal	Relevant, always included	We are subject to various laws, ordinances, regulations and other requirements of government authorities in foreign countries and in the United States, any violation of which could potentially create substantial liability for us and also damage to our reputation. Changes in laws, ordinances, regulations or other government policies, the nature, timing, and effect of which are uncertain, may significantly increase our expenses and liabilities. If we do not or cannot adequately protect our intellectual property, if third parties infringe or misappropriate our intellectual property rights, or if third parties claim that we are infringing or misappropriating their intellectual property rights, we may suffer competitive injury, expend significant resources enforcing our rights or defending against such claims, or be prevented from selling products or services. We keep abreast of these emerging legal issues, such as litigation claims through our ERM process and by our various legal and regulatory compliance teams. There were no climate-related litigation claims in 2019.
Market	Relevant, always included	We are exposed to market risk, primarily related to foreign currency exchange rates, trade restrictions and tariffs, and interest rates. These exposures are actively monitored by management and always included in our ERM process, as described in C2.2. Our exposure to foreign exchange rate risk is due to certain costs, revenue and borrowings being denominated in currencies other than one of our subsidiaries functional currency. Similarly, we are exposed to market risk as the result of changes in interest rates which may affect the cost of our financing. It is our policy and practice to use derivative financial instruments only to the extent necessary to manage exposures.
Reputation	Relevant, always included	We are exposed to various product, regulation and physical risks, which could potentially damage our reputation. Product recalls, removals and product liability and quality claims can result in significant costs, as well as negative publicity and damage to our reputation that could reduce demand for our products and have a material adverse effect on our business, financial condition and results of operations. In addition, Xylem is subject to various laws, ordinances, regulations and other requirements of government authorities in foreign countries and in the United States, any violation of which could potentially create substantial liability for us and also damage to our reputation. Xylem also partners with and/or sponsors other entities. If one of these partners gains negative publicity, it could affect our reputation. Finally, while Xylem is not directly dependent on large quantities of water for our operations, as a water technology company, lack of proactive management of our energy and water footprints and climate risk could damage our reputation and reduce demand for our products.
Acute physical	Relevant, always included	If our facilities or operations were to be disrupted as a result of a significant equipment failure, natural disaster, power outage, fire, explosion, pandemic, terrorism, cyber-based attack, labor disputes, work stoppages or slowdowns, adverse weather conditions or other reason, our financial performance could be adversely affected as a result of our inability to meet customer demand. Interruptions could increase our costs and reduce our sales. Any interruption in capability could require us to make substantial capital expenditures to remedy the situation, which could negatively affect our profitability and financial condition. Any recovery under our insurance policies may not offset the lost sales or increased costs that may be experienced during the disruption of operations, which could adversely affect our business, financial condition and results of operations. Weather conditions and climate changes may adversely affect, or cause volatility in, our financial results. Weather conditions, including heavy flooding, droughts and fluctuations in temperatures or weather patterns, including as a result of climate change, can positively or negatively impact portions of our business. Within the dewatering space, pumps provided through our Godwin and Flygt brands are used to remove excess or unwanted water. Heavy flooding due to weather conditions drives increased demand for these applications. On the other hand, drought conditions drive higher demand for pumps used in agricultural and turf irrigation applications, such as those provided by our Goulds Water Technology and Lowara brands. Fluctuations to warmer and cooler temperatures result in varying levels of demand for products used in residential and commercial applications where homes and buildings are heated and cooled with HVAC units such as those provided by our Bell & Gosset brand. Given the unpredictable nature of weather conditions and climate change, this may result in volatility for certain portions of our business, as well as the operations of certain of our customers and suppliers. Due to the nature of this risk, acute physical risk is always considered in our ERM process, as described in C2.2.
Chronic physical	Relevant, always included	Water and our climate are deeply intertwined. According to research by the Intergovernmental Panel on Climate Change (IPCC), climate change will intensify risks associated with water availability and quality. Climate change will exacerbate the water challenges that lie at the heart of Xylem's work. Using the Global Water Tool developed by the World Business Council for Sustainable Development, we conducted a water risk analysis for 270 facilities in 2016. In 2018, we began using the WRI Aqueduct Water Risk Atlas Tool to conduct water sensitivity analyses and communicate water use and risks relative to water availability. Last year 310 (over 90%) of Xylem facilities were analyzed. As a part of this analysis, we mapped our facilities to global water basins, determining 114 facilities are located in areas with less than 1700 m ³ /(person*year) of water available. Among these facilities, is one facility what constitutes at least 4% of our annual revenues and has hence considered to have substantive strategic and financial impact. (Shenyang, China). Inadequate water supply for our operations could result in increased operating costs and reduced production capacity.

C2.3

(C2.3) Have you identified any inherent climate-related risks with the potential to have a substantive financial or strategic impact on your business?

Yes

<Not Applicable>

Company-specific description

Our operations and products are subject to and affected by many federal, state, local and foreign environmental laws and regulations. We could be affected by future environmental laws or regulations, including, for example, those imposed in response to climate change concerns, which may require operating and capital expenditures. We foresee international agreements such as the UN Paris Agreement to eventually lead to increased regulatory burdens and operating costs. Various countries around the world have or are considering implementing electricity and fuel or CO2 related taxes. As part of our environmental due diligence process, we have identified "high risk" countries that Xylem operates in such as Denmark, Finland, Netherlands, Norway, Sweden, and the UK, where such regulation has been adopted. Our facilities may also become subject to GHG regulations, including carbon taxes, in additional countries where such regulations are in place, but not currently applicable to our facilities. These "medium risk" countries include the US, South Africa, Australia, New Zealand, Ireland, and throughout continental Europe. After conducting an assessment of the current market, Xylem believes the risks for carbon taxes are low for its facilities. In addition, though emissions from stationary combustion at Xylem facilities may be subject to cap and trade regulation, we believe the risks from these frameworks are low. In general, our facility-level direct GHG emissions from stationary combustion are low and do not meet the thresholds for participation, as such we believe our facilities are not likely to be subject to cap and trade regulation.

Time horizon

Short-term

Likelihood

About as likely as not

Magnitude of impact

Low

Are you able to provide a potential financial impact figure?

Yes, a single figure estimate

Potential financial impact figure (currency)

1500000

Potential financial impact figure – minimum (currency)

<Not Applicable>

Potential financial impact figure – maximum (currency)

<Not Applicable>

Explanation of financial impact figure

When Xylem was a division of ITT Corporation, ITT conducted a country-specific analysis on impact of carbon taxes and cap-and-trade regulation on its facilities. Costs of compliance with carbon taxes and cap-and-trade were determined to range from 0.2 to 1.5 million US\$ annually. Xylem has not yet conducted a separate sensitivity analysis as a stand-alone company, but understands and is aware of, from ITT's analysis, the financial impact of price and/or tax increases related to CO2e emissions.

Cost of response to risk

0

Description of response and explanation of cost calculation

We reduce our exposure to these risks by actively managing our GHG. We exceeded our goal to reduce net GHG emissions intensity by 20% by 2019, achieving a 28.3% reduction. Lowering our emissions may reduce the likelihood of cap-and-trade regulations and carbon taxes increasing our tax burden. Electricity consumption is the largest contributor to GHGs associated with our operations which we aim to reduce by reducing energy use and increasing investments in renewable energy. We had identified our highest-emitting activities and rolled out emissions reduction activities, resulting in a 12.3% decrease in GHG emissions intensity from 2018 to 2019. We have also engaged employees on "Energy Treasure Hunts" to find energy and GHG reduction opportunities. Treasure Hunts were conducted at 20 Xylem sites around the world in 2019, starting with our highest resource-consuming facilities. Through GenSuite, we determined that in 2019, these efforts led to 62 recommended projects, 52% of which are underway. These projects are expected to avert 406 tons of CO2 emissions and save 601,000 kWh. To keep abreast with emerging regulatory requirements, we also include climate change in our semi-annual enterprise risk management process. We are a signatory to the American Business Act on Climate Pledge, We Are Still In Declaration, United Nations Care for Climate and have a climate change policy.

Comment

Many of these energy-saving projects are low- or no-cost improvements and relatively easy to implement, such as the installation of efficient lighting and mechanical systems, refrigeration systems and office equipment. During 2019, we invested in 5 projects involving replacement of less-efficient lighting units with LED lighting. Such projects were executed at several facilities in the US, Chile, UK, Germany, and Mexico. It is estimated that the yearly impact of those projects is around 5,000,000 kWh per year of electricity and 250 tons per year of CO2 emissions. One of the simplest ways to reduce our overall GHG emissions is through the purchase of renewable energy credits and renewable energy. As of year-end 2019, 63 Xylem manufacturing facilities and sales offices purchased electricity generated from renewable sources. Combined, these sites purchased 17,605 CO2-equivalent metric tons in renewable energy, electricity and gas during 2019.

Where in the value chain does the risk driver occur?

Direct operations

Risk type & Primary climate-related risk driver

Chronic physical	Other, please specify (water availability and quality)
------------------	---

Primary potential financial impact

Increased indirect (operating) costs

Climate risk type mapped to traditional financial services industry risk classification

<Not Applicable>

Company-specific description

Water and our climate are deeply intertwined. According to research by the Intergovernmental Panel on Climate Change (IPCC), climate change will intensify risks associated with water availability and quality. Moreover, the transport, treatment, and use of both clean water and wastewater are significant sources of GHG emissions. Climate change will exacerbate the water challenges that lie at the heart of Xylem's work. As a global water technology company, we actively manage our own water

footprint and we work with our partners to increase water productivity, quality and resilience, resulting in direct and indirect benefits to climate change. In addition to our comprehensive Enterprise Risk Management (ERM) Program, Xylem uses the WRI Water Aqueduct tool to analyze which sites are at risk of a host of environmental factors that would lead to water scarcity, including physical risk quality, physical risk quantity, baseline water stress, regulatory and reputational risk, inter-annual and seasonal availability, flood occurrence, drought severity, upstream storage, groundwater stress, return flow ratio, upstream protected land, media coverage, access to water, and threatened amphibians. Considering all the factors, Xylem's facility in Shenyang, China, is found to be in an area of extreme water scarcity. Even though Xylem is not dependent on large quantities of freshwater for production, should water cease as a source for this site, Xylem's production capacity would reduce, and cause a substantive financial impact on our business.

Are you able to provide a potential financial impact figure?

Yes, a single figure estimate

Potential financial impact figure (currency)

188000000

Potential financial impact figure – minimum (currency)

<Not Applicable>

Potential financial impact figure – maximum (currency)

<Not Applicable>

Explanation of financial impact figure

The facilities located in Shenyang, China, is considered a "critical" Xylem site as it contributes to 4% or more of Xylem's overall revenue. Xylem's overall revenue in 2019 was 5.2 billion, therefore 4% would be 208 million.

Cost of response to risk

500000

Description of response and explanation of cost calculation

We achieved a 20% reduction in water use intensity in 2019, which fell short of the 25% goal we set in 2014. To accelerate our efforts, we have committed to employing 100% process water recycling at our major facilities by 2025 using Xylem technologies and equipment. Together with our climate change policy, our 2025 signature water goals helps us manage our water consumption and reduce our exposure to these risks. We also signed the CEO Water Mandate in 2017. We have implemented a variety of projects at our facilities, such as rainwater collection for test tank use and recycled water use for landscaping and sanitation. We also equip sites with our own energy and water saving technologies. These initiatives not only improve our cost efficiencies and insulate from potential future risk, but also build our reputation as a water technology company and provide an internal testing ground for our products and solutions. For example, the upgrade of the existing water treatment facility at the Shenyang, China included the installation of Xylem products allowing the site to treat its wastewater and reuse it. The facility reduced its water withdrawal by 25% from 2018 to 2019 and increased its water reuse by 42%. We also use tools such as GenSuite and Global Water Deck for our direct operations; and water footprint calculation tool and pilot sustainability audit program for suppliers in water-stressed basis.

Comment

As a water technology company, Xylem is able to use our own products to reduce our water usage, and therefore, risk. Our Hydroinfinity product is also being used at facilities located in water-stressed areas to treat contaminated water, chemical-free to independently verified drinking water standards. Electronic sensors and remote monitoring enable continuous monitoring of the water quality. In 2018, Hydroinfinity/Rainmaster units were installed at our sites in Chihuahua, Mexico (extreme high-risk water stress), Hoddesdon, United Kingdom (high-risk water stress), and Kolding, Denmark (not water-stressed); these units were also installed in 2017 in Montecchio, Italy (high-risk water stress), and Cape Town, South Africa (extreme high-risk water stress).

<Not Applicable>

Company-specific description

Weather conditions and climate changes may adversely affect, or cause volatility in, our financial results. Weather conditions, including heavy flooding, droughts and fluctuations in temperatures or weather patterns, including as a result of climate change, can positively or negatively impact portions of our business. Within the dewatering space, pumps provided through our Godwin and Flygt brands are used to remove excess or unwanted water. Heavy flooding due to weather conditions drives increased demand for these applications. On the other hand, drought conditions drive higher demand for pumps used in agricultural and turf irrigation applications, such as those provided by our Goulds Water Technology and Lowara brands. Fluctuations to warmer and cooler temperatures result in varying levels of demand for products used in residential and commercial applications where homes and buildings are heated and cooled with HVAC units such as those provided by our Bell & Gosset brand. Given the unpredictable nature of weather conditions and climate change, this may result in volatility for certain portions of our business, as well as the operations of certain of our customers and suppliers.

Potential financial impact figure – minimum (currency)

<Not Applicable>

Potential financial impact figure – maximum (currency)

<Not Applicable>

Explanation of financial impact figure

Our business is impacted by an increasing amount of short cycle, and book-and-bill business, which we have limited insight into, particularly for the business that we transact through our distributors. We are also impacted by large projects, whose timing can change based upon customer requirements due to a number of factors affecting the project, such as funding, readiness of the project and regulatory approvals. As it is difficult to determine the potential financial impact of this risk, we have provided our 2019 revenue for our water infrastructure and applied water segments to provide a magnitude of this impact.

Cost of response to risk

189000000

Description of response and explanation of cost calculation

Our Research and Development (R&D) efforts anticipate customer needs and emerging trends. Our engineers are involved in new product development and improvement of existing products to increase customer value. We have R&D and product development capabilities around the world. R&D activities are initially conducted in our technology centers, located in conjunction with some of our major manufacturing facilities to ensure an efficient and robust development process. We have several global technical centers and local development teams around the world where we are supporting global needs and accelerating the customization of our products and solutions to local needs. For example, AWS e80SC, manufactured in Morton Grove, IL, was localized to India. This allowed Xylem to decrease the supply chain footprint (i.e., less transportation) and provide a locally relevant product at a local competitive price. In some cases, our R&D activities are conducted at our piloting and testing facilities and at strategic customer sites. These piloting and testing facilities enable us to serve our strategic markets globally.

Comment

R&D spending was \$191 million, or 3.6% of revenue, in 2019 as compared to \$189 million, or 3.6% of revenue, in 2018.

C2.4**(C2.4) Have you identified any climate-related opportunities with the potential to have a substantive financial or strategic impact on your business?**

C2.4a**(C2.4a) Provide details of opportunities identified with the potential to have a substantive financial or strategic impact on your business.****Identifier**

Opp1

Where in the value chain does the opportunity occur?

Downstream

Opportunity type

Products and services

Primary climate-related opportunity driver

Development of climate adaptation, resilience and insurance risk solutions

Primary potential financial impact

Increased revenues resulting from increased demand for products and services

Company-specific description

The effects of climate change present serious water challenges for our planet and Xylem is well-positioned to provide climate adaptation solutions that address global water needs. Increased natural disasters will increase global demand for products and services needed during flood and drought response. Products such as our Godwin dewatering pumps help remove and/or redirect flood water. Our Goulds Water Technology and Lowara brands provide efficient pumps that help our customers weather drought conditions. Our Wedeco brand also provides wastewater recycling solutions that help mitigate drought risk. The threat of extreme weather events also increases the need to upgrade existing infrastructure to ensure reliable access to water in an emergency. As public and private organizations prepare for climate scenarios, the demand for Xylem's water, wastewater, and resiliency services will increase. Through brands including Essence of Life, Leopold and Wedeco, we provide efficient delivery and use of clean water and efficient and effective management of wastewater. Through brands such as Flygt, Godwin, and Pure Technologies, we help customers manage water-related risks and the resilience of water infrastructure. As the world transitions to a low-carbon economy, pressures to upgrade energy-intensive wastewater management systems will also increase. Xylem provides energy-saving solutions such as our Wedeco Duron UV disinfectant system that provides an energy-efficient alternative for wastewater treatment and our Flygt 4220 mixer that improves mixing efficiency in wastewater processing. The customer base for Equipment and Services (ES) in the water industry is diverse. We serve a wide range of industries, including utilities supplying water through an infrastructure network; engineering, procurement and construction (EPC) firms working with utilities to design and build water and wastewater infrastructure networks; and others, such as farms, mines, power plants, industrial facilities and residential and commercial customers. Our customers also look to us for technology and application expertise to address physical impacts of climate change. For example, Xylem's YSI brand provides real-time water quality monitoring for the Mississippi river using a platform that can be replicated around the world.

Time horizon

Short-term

Likelihood

Are you able to provide a potential financial impact figure?

Yes, a single figure estimate

Potential financial impact figure (currency)

250000000

Potential financial impact figure – minimum (currency)

<Not Applicable>

Potential financial impact figure – maximum (currency)

<Not Applicable>

Explanation of financial impact figure

Though it is difficult to determine the potential long-term financial impact climate change has on our revenue we estimate the total addressable market size of the global water industry to be approximately \$560 billion. In the short-term, we are positioned to capture favorable regulatory, demographic, and infrastructure conditions. Regulations continue movement toward environmental focuses, quality standards and energy efficiency, while demographics trend toward increased population and urbanization along with growth of the middle class in emerging markets. Further, as water scarcity becomes more prevalent and a changing climate leads to more extreme weather patterns, aging infrastructure becomes increasingly problematic. Partially due to these trends, we expect to deliver organic revenue growth of 4 to 6% through 2020. We believe up to half of this growth, or approximately \$250 million, could be directly related to the climate change trends discussed above.

Cost to realize opportunity

189000000

Strategy to realize opportunity and explanation of cost calculation

A major driver of our strategy to realize this opportunity is to continue innovating new products that provide distinctive solutions for our customers' most important water productivity, quality and resilience challenges. We measure success of our innovation strategy through our Vitality Index, or the percentage of sales from products launched in the last five years. This metric enables us to continue meeting the needs of our customers as they adapt to change climate-related risks. To meet our target, we plan to increase our R&D investment up to 5% of revenue by 2020 (up from 2.6% of revenue in 2015). Based on 6% organic growth by 2020, this may yield an increased R&D spend of approximately \$235 million. We incurred \$191 million, \$189 million, and \$181 million as a result of R&D investment spending in 2019, 2018, and 2017. Our goal is to improve product energy efficiency of specific Xylem product lines. We've increased average product energy efficiency by 2% since 2017. For example, the e-XC single stage, double suction, centrifugal pump offers a broader hydraulic range and higher efficiency than our previous models. Built on a legacy of pump innovation, the e-XC replaces the AC Series 8100, 8300 and 9100 pump range. With flow rates exceeding 57,000 gpm, it can easily handle medium and large capacity systems and higher head. Manage extra-large applications with Xylem's A-C Custom pump range. With an average energy usage of 53 KW per pump over 8,700 operating hours per year, this is a 2% energy usage improvement over the older model. Resulting in a total energy savings of 230,000 KWh. This resulted in an annual emission reduction of 115,000 kg (115 t) CO2e in 2019.

Opp2

Where in the value chain does the opportunity occur?

Downstream

Opportunity type

Markets

Primary climate-related opportunity driver

Access to new markets

Primary potential financial impact

Increased revenues through access to new and emerging markets

Company-specific description

Global macro trends, such as strengthening global environmental, climate change and water quality regulations are increasing the need for more efficient solutions. Population growth, urbanization and a growing middle class in emerging markets are boosting demand for clean water while putting strains on aging infrastructure. At the same time, the impacts of climate change are disrupting water supplies with intensifying water scarcity in many parts of the world, as well as flooding from a growing number of extreme weather events. These factors combine to produce a growing need for water and critical energy infrastructure solutions that are modern, efficient and resilient. Xylem is well-positioned to fulfil these long-term needs as our business strategy is built around creating technology-enabled solutions to increase water productivity, water quality and resilience. These factors are also increasing demand for advanced sensing technologies and data analytics. Our 2016 acquisition of Sensus enabled us to broaden our market reach into the broad category of systems intelligence, bringing best-in-class advanced metering infrastructure, advanced data analytics and software development capabilities to our portfolio. These technologies will continue to deliver value to Xylem as companies, cities and countries put in place energy-efficient, IoT-connected, climate resilient infrastructure.

Time horizon

Are you able to provide a potential financial impact figure?

Yes, a single figure estimate

Potential financial impact figure (currency)

12000000000

Potential financial impact figure – minimum (currency)

<Not Applicable>

Potential financial impact figure – maximum (currency)

<Not Applicable>

Explanation of financial impact figure

Due to challenges created by climate change, such as increased desire for energy and water efficiency is a factor, we foresee creating opportunities for growth in our measurement and control solutions (which includes advanced data sensing technologies and data analytics). It is difficult to determine the potential long-term financial impact climate change has on our revenue; however we estimate the global metering market to be approximately \$12 billion annually. Our 2019 revenue for our measurement and control solutions was \$1,531 million. We anticipate total revenue growth of 1% in 2020, with organic revenue growth anticipated to be in the range of 1% to 3%.

Cost to realize opportunity

1700000000

Strategy to realize opportunity and explanation of cost calculation

In 2016, we acquired Sensus, a leading provider of smart meters, network technologies and advanced data analytics, with more than 80 million metering devices installed globally for \$1.7 billion. In 2017, we implemented an organizational redesign by moving Xylem's Analytics business from our Water Infrastructure segment to combine it with our Sensus and Visenti businesses to form our Measurement and Control Solutions business segment. We believe that the combination of these businesses will enhance our focus on advanced sensing technologies and will lead to operating efficiencies by integrating the supply chain process and moving to a leaner functional structure.

Direct operations

Opportunity type

Resource efficiency

Primary climate-related opportunity driver

Use of more efficient production and distribution processes

Primary potential financial impact

Reduced indirect (operating) costs

Company-specific description

Increasing attention to climate change is providing companies with a stronger business case to pursue voluntary energy efficiency, GHG reduction and renewable energy initiatives, such as our goal to reduce GHG emissions intensity by 20% by 2019 and develop science-based targets for GHG reduction (Scope 1,2,3) by 2025. We have exceeded our goal through a 28.3% reduction (net of renewable energy) through 2019. To achieve these goals and reduce costs, we created a cross-functional team of procurement, environment, health and safety (EHS), and operations stakeholders to implement a comprehensive energy management program in 2016. This team worked with leading energy and sustainability management company, Engie to negotiate electricity and gas contracts, lock in low energy rates, optimize tax exemption status, and identify demand reduction opportunities. Engie's continuing work with Xylem will help the company achieve cost improvement, reduce GHG emissions, manage contract coverage in deregulated markets, and gain full transparency into energy spend.

Explanation of financial impact figure

Engie, formerly ECOVA was selected to help assist our operations achieve our GHG reduction goal and to implement a comprehensive energy management program. By negotiating electricity and gas contracts, locking in low energy rates, optimizing tax exemption status, and identifying demand reduction opportunities in just four months, Engie saved Xylem more than \$500,000 of annual expenditures.

Cost to realize opportunity

0

Strategy to realize opportunity and explanation of cost calculation

To achieve our sustainability goals and reduce costs, we created a cross-functional team of procurement, environment, health and safety (EHS), and operations stakeholders to implement a comprehensive energy management program in 2016. This team worked with leading energy and sustainability management company, Engie to negotiate electricity and gas contracts, lock in low energy rates, optimize tax exemption status, and identify demand reduction opportunities. Engie's continuing work with Xylem will help the company achieve cost improvement, reduce GHG emissions, manage contract coverage in deregulated markets, and gain full transparency into energy spend. Green energy goals coincide with ENGIE Insight's Energy Supply Management services in Xylem's goal of attaining 100 percent green/renewable energy use at each of our major facilities by 2025. In regulated environments where the goal is not directly achievable, Xylem is purchasing renewable energy credits to apply as offsets.

Comment

As a part of Xylem's continuous savings opportunities program, Engie conducts comprehensive supply-side audits of our sites and our data and present us with the findings. Xylem does not incur a cost for this program. Identified savings are distributed between Xylem and Engie in a respective 70/30 split.

C3.1

(C3.1) Have climate-related risks and opportunities influenced your organization’s strategy and/or financial planning?

Yes, and we have developed a low-carbon transition plan

C3.1a

(C3.1a) Does your organization use climate-related scenario analysis to inform its strategy?

No, but we anticipate using qualitative and/or quantitative analysis in the next two years

C3.1c

(C3.1c) Why does your organization not use climate-related scenario analysis to inform its strategy?

At Xylem, sustainability is at the center of who we are and what we do. We have the opportunity to embed sustainability throughout our business to not only impact our goal of solving water, but to safeguard and enhance the company’s long-term growth. Climate change both positively and negatively impacts portions of our business. Increasingly, we are integrating climate change opportunity into our R&D and M&A strategies. Our products—such as highly-efficient water technologies, pumps and treatment solutions to use less energy and reduce life-cycle, and advanced hydrological monitoring equipment for our oceans and water bodies—are contributing to mitigating and adapting to a changing climate.

At a corporate level, climate change is embedded within our organizational governance, strategy, risk management, and metrics & targets. For instance, in 2017, Xylem became a signatory to the UN CEO Water Mandate and issued a public statement of its unwavering commitment to the principles of the Paris Climate Accord. Recently, we published a white paper entitled *Building Resilience: Creating Strong and Sustainable Cities and Communities* that outlines four categories of actions to increase the resilience of cities around the world: 1) ensuring water security; 2) strengthening critical infrastructure; 3) driving response and recovery; and 4) engaging community stakeholders.

In 2019, we began exploring additional frameworks and reporting standards and guidelines (e.g. CDSB, SASB, TCFD, etc.) in order to evaluate ways to enhance our climate change and water reporting. We anticipate adding additional qualitative and quantitative analysis going forward. We were pleased to see the recommendations of the Task Force on Climate-Related Financial Disclosure (TCFD) and anticipate implementing the TCFD recommendations, including conducting a climate-related scenario analysis in the future. This will be conducted as part of our annual risk assessment process, which engages executives throughout the organization.

C3.1d

(C3.1d) Describe where and how climate-related risks and opportunities have influenced your strategy.

	Have climate-related risks and opportunities influenced your strategy in this area?	Description of influence
Products and services	Yes	Risks and opportunities related to changing customer behaviour and the global demand for products and services (as described in C2.3a Risk 3 and C2.4a Opportunity 1) have influenced Xylem’s product portfolio and strategy. As outlined in Xylem’s Climate Change Policy, we are committed to developing mitigation and adaptation solutions to the water-related challenges associated with climate change through our products. We provide products that aid customers in reducing their own environmental footprint by reducing their energy and other resource consumption needs. As part of our strategy, we measure our contributions to products and solutions that address a changing climate through two goals: (1) Improve product energy efficiency of specific Xylem product lines; measured as increase in average product efficiency; and (2) Increase Vitality Index (percentage of sales from products launched in the past five years) to 30% by 2020 to drive product innovation and efficiency. In 2019, we achieved a 25% increase in Vitality Index since 2015.
Supply chain and/or value chain	Yes	In 2019, more than 200 suppliers were audited through the Supplier Quality Assessment Program which included sustainability elements. Suppliers must reach a certain score to be considered part of our Preferred Supplier Program. As part of that program, there is a requirement for suppliers to participate in the EcoVadis CSR engagement platform. The EcoVadis questionnaire includes questions about climate change and water performance. We rolled out the first two campaigns in 2020. There is also a requirement for our suppliers to sign the WBSCD WASH pledge. In addition, we have engaged with CDP to roll out the supplier program for our preferred suppliers to start reporting out on climate change and water performance beginning in 2021. Suppliers not engaging in the EcoVadis WASH or CDP programs by 2025 will not be eligible for Preferred Supplier status at Xylem in the future.
Investment in R&D	Yes	Xylem develops and brings to market innovative solutions that create major water, energy and cost efficiencies, helping to solve critical water-related challenges associated with climate change. As part of our strategy, we invest substantial resources into R&D. Our focus on innovation and technology includes a significant increase in R&D investment to reach 5.0% of our revenue by 2020. We incurred \$191 million, \$189 million, and \$181 million as a result of R&D investment spending in 2019, 2018 and 2017.
Operations	Yes	Risks related to future environmental laws and regulations, such as those imposed in response to climate change concerns (as described in C2.3a Risk 1) could result in increased operating costs for Xylem. For example, our facilities may become subject to GHG regulations, including carbon taxes. Conversely, we see resource efficiency as an opportunity that could lead to reduced operating costs (as described in C2.4a Opportunity 3). Xylem’s Climate Change Policy outlines our climate change strategy on a corporate level, including a goal to reduce our emissions intensity by 20% by 2019. By the end of 2019, we exceeded this goal, reaching a 28.3% reduction from 2014. As part of our strategy to use resources efficiently, we drive continuous improvement to strengthen our Lean Six Sigma and global procurement capabilities and continue to optimize our cost structure through business simplification by eliminating structural, process and product complexity.

C3.1e

(C3.1e) Describe where and how climate-related risks and opportunities have influenced your financial planning.

	Financial planning elements that have been influenced	Description of influence
Row 1	Capital allocation	<p>Given that sustainability is core to Xylem's business strategy, the Company has sought to align its financing with its overall sustainability profile. In March 2019, Xylem announced the execution of a five-year \$800 million Senior Unsecured Revolving Credit Facility that includes a sustainability-linked pricing mechanism. The deal marked one of the first sustainability-improvement loans in the United States and the first in the General Industrial Sector. The interest rate is index-linked to Xylem's overall sustainability performance as rated by Sustainalytics, a leading independent global provider of environmental, social and corporate governance ratings. Improvements in Xylem's sustainability performance will reduce interest rates under the facility. As part of our commitment to create economic and social impact, we aligned finance objectives with company sustainability goals. This allowed us to proactively review opportunities when refinancing Xylem's revolving credit facility and tied our ESG performance over 5 years to actual benefit/cost of variable funding rates. This new approach creates internal alignment (functional and Business Unit teams) for targets and plans for sustainability improvement across the company globally. Beginning in 2020, Xylem's Green Finance Framework (a green bond offering of \$1 billion in Senior Unsecured Notes) will fund Eligible Projects that are intended to provide clear environmental benefits. The Green Bond Principles (GBP) and the Green Loan Principles (GLP) recognize eligible green categories for utilization of green proceeds, contributing to five high-level environmental objectives: climate change mitigation, climate change adaptation, natural resource conservation, biodiversity conservation and pollution prevention and control. Project evaluation and selection will be carried out by Xylem Green Finance Committee. Net outstanding proceeds of green financing instruments will be managed using a portfolio approach. Xylem intends to provide allocation and impact reporting until full allocation of net outstanding proceeds of green financing instruments. In line with the GBP and GLP, Xylem intends to allocate the net proceeds from any Green Financing to a portfolio of Eligible Projects across Xylem's three business segments: Water Infrastructure, Applied Water, and Measurement & Control. The Eligible Projects identified by Xylem fall into the following GBP/GLP categories: • Eco-efficient and/or circular economy adapted products, production technologies and processes • Sustainable water and wastewater management Xylem Activities That Would Be Eligible for Use Of Proceeds •Investments and/or expenditures for the research, development, manufacturing and distribution of products that improve water productivity, including: •Decision Intelligence, Digital and IoT-based technologies to optimize and automate water management and pollution prevention for Smart Cities & Utilities (e.g. Sensus Smart Meters) •Initiatives to improve the energy performance of existing and new products, including R&D and modifications to manufacturing lines •Investments and/or expenditures for the research, development, manufacture and distribution of products that improve water quality, including: •Water recycling and reuse technologies, purification systems and chemical-free disinfection for drinking water (e.g. Hydroinfinity) •Ultraviolet and ozone technologies to treat wastewater and process water (e.g. Wedeco) •Investments and/or expenditures for the research, development, implementation and maintenance of projects that improve water resilience, including: •Projects that strengthen critical water infrastructure •Flood control systems for storm relief infrastructure •Water leakage detection systems to reduce waste and infrastructure downtime •Projects that monitor and protect water security for communities in water-stressed regions</p>

C3.1f

(C3.1f) Provide any additional information on how climate-related risks and opportunities have influenced your strategy and financial planning (optional).

Xylem looks at advancing sustainability from two perspectives: the direct impact of the company itself, and the impact from our products and customers - active goal-setting and measurement.

- We approach business sustainability as a way to generate economic value while also creating value for society, thus meeting the needs of both
- Launched ambitious 2025 goals last year in response to escalating water challenge- built on longstanding sustainability commitment which was formalized in 2014
- Wanted to expand our strategy to put a greater focus on advancing sustainability across our products; more closely integrate sustainability into our business strategy
- This mindset and commitment has pushed us to pursue sustainability-driven financing

Our inaugural green bond offering of \$1 billion in senior unsecured notes:

- Brings sustainability to the center of our funding strategy
- Proceeds will fund green projects that help improve water accessibility, water affordability, and water systems resilience, in alignment with our Green Finance Framework

The Green Finance Framework follows the Green Bond Principles (GBP) 2018 and the Green Loan Principles (GLP) 2020 and governs which green projects Xylem may use funding for projects that are identified through periodic materiality assessments which prioritizes the issues deemed most important by stakeholders and the business which demonstrate clear environmental benefits

Eligible projects fall into two GBP and GLP categories:

- Eco-efficiency and/or circular economy adapted solutions
- Sustainable water and wastewater management

This is the second sustainability-driven financing completed by Xylem:

- o In March 2019, we executed an \$800 million revolving credit facility with a sustainability-linked pricing mechanism
- o The deal was one of the first sustainability-improvement loans in the United States and the first in the General Industrial Sector
- o Ties our financing rates to our Sustainalytics rating...important barometer of our continued commitment to sustainability

Target status in reporting year

Achieved

Is this a science-based target?

No, but we anticipate setting one in the next 2 years

Please explain (including target coverage)

As of 2019, Xylem achieved a 28.3% decrease in GHG intensity, net of renewable energy. This represents 141% of our 5-year goal. The 28.3% reduction was partly achieved by increasing our purchase of renewable energy. As of year-end 2019, 63 Xylem manufacturing facilities and sales offices purchased electricity generated from renewable sources. Combined, these sites purchased 17,605 CO2-equivalent metric tons in renewable energy, electricity and gas during 2019. In addition to purchasing renewable electricity, our sales office in the Netherlands offsets its natural gas consumption through certified green natural gas credits. Through the Gold Standard Foundation's Fairtrade Carbon Credit program, companies such as Xylem are able to invest in green energy; increase the resilience of producer groups to the negative impacts of climate change; and help provide a more sustainable future for communities through diversifying community income streams, teaching new skills and creating local employment.

C4.2

(C4.2) Did you have any other climate-related targets that were active in the reporting year?

6-10 years

Comment

In 2019, we have registered as completed in Gensuite LED projects in the United States, Chile, Germany, Mexico and the United Kingdom. The savings estimated in accordance with those records are \$61,400 USD.

C4.3c

(C4.3c) What methods do you use to drive investment in emissions reduction activities?

Method	Comment
Dedicated budget for energy efficiency	Xylem Corporate has established a specific budget for Sustainability initiatives, including energy-efficiency projects.
Employee engagement	Xylem has implemented the Energy Treasure Hunt initiative, engaging employees to identify opportunities to reduce energy use, costs and greenhouse gas emissions related to energy. Xylem uses GenSuite to follow up on each project.

C4.5

(C4.5) Do you classify any of your existing goods and/or services as low-carbon products or do they enable a third party to avoid GHG emissions?

Yes

C4.5a

(C4.5a) Provide details of your products and/or services that you classify as low-carbon products or that enable a third party to avoid GHG emissions.

Level of aggregation

Group of products

Description of product/Group of products

As early as 2010, our Flygt brand set up a goal based on the average efficiency of sold products to measure progress on this specific priority (about 30% of our revenue, but the product family that consume most energy) and target year over year improvements. In 2019, the average efficiency of these product lines was 61.8 percent, slightly up from 61.6 percent in 2018. Our 2019 performance represents a 3.9 percent improvement since 2012. The total energy consumption of all the pumps produced in 2018, along their lifetime represents 100,000 GWhr (Giga Watt Hour). The 0.2% energy efficiency improvement of the 2019 production represents a total reduction of environmental impact of 50,000 tons of CO2. Our Flygt brand essentially comprises submersible pumps and mixers. In parallel, other Xylem brands such as Lowara have also put a strong focus on increasing their product efficiency.

Are these low-carbon product(s) or do they enable avoided emissions?

Avoided emissions

Taxonomy, project or methodology used to classify product(s) as low-carbon or to calculate avoided emissions

Other, please specify (Average energy efficiency of selected product lines and set up of a goal to increase this number year by year. The difference in average energy efficiency is used as a basis for an estimation of avoided CO2 emissions)

Comment

One of Xylem's priorities is finding ways to make our products more energy efficient. Efficiency breakthroughs will not only help users save energy and decrease costs, but they will also help create a more sustainable planet. Our product development process includes a step in which we evaluate new products from a sustainability perspective — considering recyclability, use of less harmful materials, energy efficiency and other factors. By considering sustainability early in the design phase, we are better positioned to make products in a more energy- and cost-efficient manner — something that is not always possible later in the process.

Group of products

Description of product/Group of products

In 2017, we unveiled a new series of dewatering pumps under our Godwin brand. The Godwin S Series Dri-Prime pump reduces emissions by 90 percent and fuel consumption by 10 percent. Furthermore, in an industry first, it can be monitored and controlled from any smartphone, tablet or desktop computer, anywhere in the world. The new Godwin series also features Xylem's unique Flygt N-Technology for more efficient wastewater transport. The pump offers self-cleaning capability and sustained hydraulic efficiency.

Are these low-carbon product(s) or do they enable avoided emissions?

Avoided emissions

Taxonomy, project or methodology used to classify product(s) as low-carbon or to calculate avoided emissions

Comment

Xylem announced the new Godwin NC150S Dri-Prime pump in October 2017. The first pump to be unveiled from Xylem's Godwin S Series of smart dewatering pumps - will offer Isuzu Final Tier 4 (FT4) engines as standard for customers in the U.S. market. The Godwin NC150S is equipped with Isuzu's 4LE2X industrial diesel engine - an advanced, powerful diesel engine that complies with the U.S. Environmental Protection Agency's (EPA) Final Tier 4 (FT4) requirements and has been shown to deliver significantly greater uptime and lower maintenance. As a result, the Godwin NC150S reduces total cost of ownership with emissions cut by 90 percent and fuel consumption by 10 percent on average. In 2019, sales of the Godwin S Series equated to 0.03% of our total revenue.

Correction of 2018 reporting errors for Purchased Electricity & Heat, Scope 2 Location & Market Based and Total Indirect GHG Emissions. Mainly related to emission factors used for a few facilities and GHG Emissions addition of renewable portion of Heat for 1 facility. The Indirect GHG Emission correction for 2018 was 0.54 percent.

C6.4

(C6.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1 and Scope 2 emissions that are within your selected reporting boundary which are not included in your disclosure?

No

C6.5

(C6.5) Account for your organization's gross global Scope 3 emissions, disclosing and explaining any exclusions.

Purchased goods and services

Evaluation status

Relevant, calculated

Metric tonnes CO₂e

1978871

Emissions calculation methodology

Emissions were calculated using the Economic-Input-Output methodology. EIOLCA uses Xylem's total spend in different categories of goods and services to estimate the associated emissions. For any purchase types identified by the user as Standard Good or Service, the sector of purchase chosen by the user is linked to a 2009 world multi-regional estimate of average environmental impacts by region-sector combined with global warming potential impact assessment (Timmer 2012, IPCC 2007). The reference flow quantity is provided by the user in the form of purchase quantity in basic price USD.

Reason for change

The gross global combined Scope 1 and 2 (location-based) emissions for 2019 consist of a gross sum of emissions resulting from the following: Fuel from non-renewable energy, Electricity from renewable and non-renewable energy, and self-generating renewable energy. The intensity figure is calculated by dividing the combined Scope 1 and 2 emissions by the total revenue (millions) in USD for 2019. As of year-end 2019, 63 Xylem manufacturing facilities and sales offices purchased electricity generated from renewable sources. Combined, these sites purchased 17,605 CO2-equivalent metric tons in renewable energy, electricity and gas during 2019. As described in question C4.3b, during 2019 we also capitalized on the benefits of our investments in five energy reduction projects involving replacement of less-efficient lighting units with light-emitting diode (LED) lighting at major facilities and from several other opportunities like compressed air efficiencies, equipment turn off after hours and other LED replacements in smaller facilities. The estimated yearly impact/reduction of those projects is around 5,000,000 kWh per year of electricity and 250 tons per year of CO2 emissions.

C7. Emissions breakdowns

C7.9

(C7.9) How do your gross global emissions (Scope 1 and 2 combined) for the reporting year compare to those of the previous reporting year?

Decreased

C7.9a

(C7.9a) Identify the reasons for any change in your gross global emissions (Scope 1 and 2 combined), and for each of them specify how your emissions compare to the previous year.

	Change in emissions (metric tons CO2e)	Direction of change	Emissions value (percentage)	Please explain calculation
Change in renewable energy consumption	281	Decreased	0.3	Due to a 9% increase in renewable energy purchases in 2019, emissions have not grown as high as could be expected. In 2019, 281 tons of CO2e were reduced by additional RECs and green gas purchased. Our total Scope 1 and Scope 2 emissions in the previous year was 86,586 t CO2e, therefore we arrived at -0.3%. through $(-281 / 86,586) * 100 = -0.3\%$ (i.e. a 0.3% decrease in emissions).
Other emissions reduction activities	250	Decreased	0.3	Due to LED lighting retrofits in 2019, emissions have not grown as high as could be expected. Last year 250 tons of CO2e were reduced by LED lighting retrofits. Our total Scope 1 and Scope 2 emissions in the previous year was 86,586 tCO2 e, therefore we arrived at -0.3%. through $(-250 / 86,586) * 100 = -0.3\%$ (i.e. a 0.3% decrease in emissions).
Divestment	0	No change

Please explain

Global travel and logistics are high-emitting components of Xylem's business operations. Through travel curtailment efforts, Xylem reduced its global business travel spend by more than 19 percent from 2018 to 2019 which represents close to 9 percent reduction in scope 3 indirect greenhouse gas emissions.

C8. Energy**C8.1****(C8.1) What percentage of your total operational spend in the reporting year was on energy?**

More than 10% but less than or equal to 15%

C8.2**(C8.2) Select which energy-related activities your organization has undertaken.**

	Indicate whether your organization undertook this energy-related activity in the reporting year
Consumption of fuel (excluding feedstocks)	Yes
Consumption of purchased or acquired electricity	Yes
Consumption of purchased or acquired heat	Yes
Consumption of purchased or acquired steam	No
Consumption of purchased or acquired cooling	No
Generation of electricity, heat, steam, or cooling	Yes

C8.2a**(C8.2a) Report your organization's energy consumption totals (excluding feedstocks) in MWh.**

	Heating value	MWh from renewable sources	MWh from non-renewable sources	Total (renewable and non-renewable) MWh
Consumption of fuel (excluding feedstock)	LHV (lower heating value)	1426	188091	189517
Consumption of purchased or acquired electricity	<Not Applicable>	97505	69727	167232
Consumption of purchased or acquired heat	<Not Applicable>	3264	5234	8498
Consumption of purchased or acquired steam	<Not Applicable>	<Not Applicable>	<Not Applicable>	<Not Applicable>
Consumption of purchased or acquired cooling	<Not Applicable>	<Not Applicable>	<Not Applicable>	<Not Applicable>
Consumption of self-generated non-fuel renewable energy	<Not Applicable>	1031	<Not Applicable>	1031
Total energy consumption	<Not Applicable>	103226	263052	366278

C8.2b

(C8.2b) Select the applications of your organization's consumption of fuel.

	Indicate whether your organization undertakes this fuel application
Consumption of fuel for the generation of electricity	No
Consumption of fuel for the generation of heat	No
Consumption of fuel for the generation of steam	No
Consumption of fuel for the generation of cooling	No
Consumption of fuel for co-generation or tri-generation	No

C8.2c

(C8.2c) State how much fuel in MWh your organization has consumed (excluding feedstocks) by fuel type.

61.2

Metric numerator

Other, please specify (Average Power gained by flow (Unit weight x flow rate x head rise))

Metric denominator

Other, please specify (Average Power supplied to pump)

Comment

In 2019, we continued to increase product energy efficiency, achieving a 0.2 percent increase in average product energy efficiency across the entire Flygt product line since 2018. In 2019, we continued to increase the energy efficiency of our new to market products. These products are designed using state-of-the-art design system and are meant to reduce the energy required for operations, versus older models. 2019 average sold efficiency for Water Infrastructure was down 0.4% compared to 2018. This was due to increased sales of older models for specific projects. We currently offer our customer speed regulated machines which improve the efficiency of older models, however, we have yet to integrate these innovations into our Average sold efficiency metric.

Category of product or service

Xylem develops and brings to market innovative solutions that create major water, energy and cost efficiencies, helping utilities solve critical water challenges for their communities making them more sustainable with increased resource-use efficiency and greater adoption of cleaner and environmentally sound technologies and industrial processes. Xylem invests substantial resources into Research and Development and our leading-edge technologies facilitate sustainable and resilient infrastructure development in developing countries. In 2019, total R&D investments were 191 USD million.

C10.2

(C10.2) Do you verify any climate-related information reported in your CDP disclosure other than the emissions figures reported in C6.1, C6.3, and C6.5?

No, we do not verify any other climate-related information reported in our CDP disclosure

C11. Carbon pricing

C11.1

(C11.1) Are any of your operations or activities regulated by a carbon pricing system (i.e. ETS, Cap & Trade or Carbon Tax)?

No, and we do not anticipate being regulated in the next three years

C11.2

(C11.2) Has your organization originated or purchased any project-based carbon credits within the reporting period?

No

C11.3

(C11.3) Does your organization use an internal price on carbon?

No, and we do not currently anticipate doing so in the next two years

C12. Engagement

C12.1

(C12.1) Do you engage with your value chain on climate-related issues?

Yes, our suppliers

Yes, our customers

C12.1a

(C12.1a) Provide details of your climate-related supplier engagement strategy.

Type of engagement

Compliance & onboarding

Details of engagement

Included climate change in supplier selection / management mechanism

% of suppliers by number

100

% total procurement spend (direct and indirect)

100

% of supplier-related Scope 3 emissions as reported in C6.5

Rationale for the coverage of your engagement

We expect 100 percent of our suppliers to adhere to our global sustainability standards. As part of our procurement process, any new Xylem supplier is required to align with our business standards in terms of product quality, process capabilities and sustainable actions. During our supplier capability assessment, we ask, "What actions are in place regarding the reduction of energy consumption and the emissions of greenhouse gases (GHGs)?" and rate their actions as "acceptable" or "not acceptable." We then summarize key areas for supplier improvement. Additionally, we began implementing a sustainability audit process that prioritizes suppliers located in countries where human and labor rights issues could be a concern, and those located in water-stressed areas.

Impact of engagement, including measures of success

Through these engagements, we ensure that all of the suppliers we work with conduct business in compliance with all applicable environmental laws and regulations. This minimizes environmental pollution, promotes an efficient use of natural resources and protects the environment. The supplier must ensure compliance with product-related requirements and may be required to declare the material content and origin of products delivered to Xylem. Suppliers shall have environmental procedures in accordance with applicable elements in ISO14001 or equivalent standard.

Comment

C12.1b

(C12.1b) Give details of your climate-related engagement strategy with your customers.

Type of engagement

Education/information sharing

Details of engagement

Run an engagement campaign to educate customers about the climate change impacts of (using) your products, goods, and/or services

% of customers by number

100

% of customer - related Scope 3 emissions as reported in C6.5

Portfolio coverage (total or outstanding)

<Not Applicable>

Please explain the rationale for selecting this group of customers and scope of engagement

As a global water technology company, we have the opportunity to address the many water challenges—including climate-related issues, such as access to freshwater and energy-efficiency in water infrastructure. Solving Water is a huge and vital undertaking that calls for collaboration and teamwork across our value chain. For customer and end users, we publish news about our products and services through a variety of media channels, original research, white papers and case studies, a customer focused digital magazine, Making Waves, and a quarterly magazine, Mission: Water, which features stories about scientists, environmentalists and the various challenges they work to solve. For example, in the freely accessible Making Waves, a recently published article—Iceland stream warming study gives preview of climate change—we discuss how Xylem's YSI ProODO handheld dissolved oxygen meters were employed to study how global climate change could affect rivers and streams. In a recent Making Waves webinar—Urban Resilience Planning – How Ready Are You?—also freely available at makingwaves.xylem.com, we provide case studies of how communities are designing resilient pump stations, creating early warning systems for flooding, and developing rapid response and recovery plans using Xylem solutions. We expand upon this notion of sustainable communities in our Building Resilience brochure. We identify key points to building resilience: ensuring water security, strengthening critical infrastructure, driving response and recovery and engaging community stakeholders. Around the world and over the years, Xylem has worked with cities and communities to manage water scarcity. Several case studies are mentioned such as using the Wedeco PDO ozone generators in Wichita, Kansas, to recharge aquifers through treated freshwater injections. By involving the public in resiliency decisions and planning, communities are empowered to withstand unexpected climate events that affect their livelihoods and access to water. We provide customers the ability to earn complimentary CEU credits by completing this online webinar. Bell & Gosset's "Little Red Schoolhouse" goes beyond product training to educate today's engineers on hydronic systems and system design. Our program provides a customized learning environment for each attendee and enables them to take courses at their convenience.

Impact of engagement, including measures of success

The measure of success of our educational and information sharing programs are reflected in the increased reputation of our Company, number of visible leadership roles in industry organizations obtained and number of speaking engagement at industry thought leader events. The Making Waves platform has made an impact by providing informed, useful and industry-leading commentary on the world of water. Due to its success in educating customers on the latest climate and water-related Xylem technologies, we have translated Making Waves into eight languages—English, Spanish, German, French, Italian, Portuguese, Swedish, and Chinese.

C12.3

(C12.3) Do you engage in activities that could either directly or indirectly influence public policy on climate-related issues through any of the following?

- Direct engagement with policy makers
- Trade associations
- Funding research organizations
- Other

C12.3a

(C12.3a) On what issues have you been engaging directly with policy makers?

Focus of legislation	Corporate position	Details of engagement	Proposed legislative solution
Other, please specify (Water Infrastructure)	Support	In 2019, Key members of the Xylem Senior Management team participated in panels in Washington D.C. during Infrastructure Week advocating for innovative solutions to Water Infrastructure issues. Al Cho served on the panel for The Value of Water Congressional Briefing: The Future of Water – Artificial Intelligence and “Smart” Water Infrastructure and Joe Vesey participated in the Bipartisan Policy Center: EPA’s Role in Building Critical Infrastructure.	Elected officials and key individuals from government agencies attended both events to learn about innovative ways to address U.S. water infrastructure challenges
Energy efficiency	Support	Xylem is a member of the trade association Europump. Markus Holmberg, from the Xylem Sundbyberg R&D Centre in Sweden, is currently chairing the Europump working group in charge of supporting the EU Commission to develop an energy efficiency regulation for wastewater pumps. Fabio Reffo, from the Xylem Montecchio R&D Centre in Italy is the chair of the Europump working group in charge of revising the current energy efficiency regulation on circulator pumps.	Europump promotes the improvement of the energy performance of all pump types by adequate measures at the different pump system levels: namely the product, extended product and system levels. Europump aims to provide policymakers with technological know-how to facilitate effective new legislation. A major example and case in point is the European Commission’s review of Commission Regulation (EU) 547/2012 (lot 11 – water pumps), Ecodesign lots 28 (wastewater pumps), and 29 (other clean water pumps), taking place in 2016. For this Europump recommends adopting the ‘Extended Product Approach’.
Energy efficiency	Support	Xylem is a member of the North American pump trade association Hydraulic Institute (HI). Mark Handzel and Chris Johnson from the Xylem R&D Center in Morton Grove and Paul Ruzicka from the Xylem R&D Center in Seneca Falls, NY are members of the Hydraulic Institute U.S. Dept of Energy Pump Energy Conservation Committee that has been working to insure all HI members are selling compliant products by the January 27, 2020 deadline. Pump products from Xylem’s Morton Grove facility were in DOE compliance three years before the effective date. Xylem has also agreed to voluntarily apply a Hydraulic Institute Energy Rating label on circulator pump products in the absence of DOE energy conservation rules that were put on hold in 2016.	Xylem has taken a leadership position in implementing U.S. and Canada Pump Energy Conservation Standards which has positioned us as a leading supplier of DOE regulated products.
Other, please specify (Water Infrastructure)	Support	In 2016, Xylem was selected to participate in the U.S. Department of Commerce’s Smart Cities Infrastructure Business Development Mission to India. Representatives from Xylem and 18 other companies took part in this Smart Cities Infrastructure Business Development Mission, which included visits to New Delhi, Mumbai, Chennai and Vizag to explore opportunities for introducing or expanding the use of sustainable products and services in India.	India is the third largest economy in the world. With approximately 1.28 billion people, which is more than a sixth of the world’s population, India has the second most populous country in the world and is estimated to add another 500 million people to its urban population over the next 40 years. India’s government has almost overwhelmingly focused on economic development and, as a result, has proposed a nationwide program to build 100 smart cities. A smart city is a city equipped with basic infrastructure to provide a decent quality of life, and a clean and sustainable environment through the application of some smart solutions. Monitoring water quality, treatment of wastewater, smart meters, renewable sources of energy, efficient green building and intelligent traffic management systems are some of the solutions of a smart city. For India, this means a wide variety of major infrastructure projects across the country will be funded by the central and state governments, as well as private sector capital, over the next few years. India’s infrastructure needs are estimated to be in the \$1.5 to \$2 trillion range.
Other, please specify (Water Infrastructure)	Support	As global demand for water increases, the business as usual approach to European water resources will not meet the needs of citizens. Xylem, with the support of Kreab, have worked to create and support EU directives related to the water industry. In 2016, we engaged with providing content and feedback on drafts of legislative documents, participating and driving some work groups, speaking the voice of Xylem at the EWA conference, establishing relationships with key Member States and Commission officials.	Xylem has proposed a Circular Economy model be integrated into the EU water industry to preserve Europe’s vital water resources. This model will promote water efficiency in the entire supply chain to create a holistic solution in the water sector. It will also promote water reuse as well as product innovation and cross-border markets.
Other, please specify	Support	Our CEO, Patrick Decker has participated in the CEO Forum Singapore International Water Week for several years discussing issues facing the global water sector, including the impact of globalization and the digital revolution, and share perspectives on the role of advanced technologies in advancing the water sector’s migration to smart infrastructure.	Government officials, world organizations and industry leaders convened with the common goal of addressing global water challenges through policymaking and thought leadership.

C12.3b

(C12.3b) Are you on the board of any trade associations or do you provide funding beyond membership?

Yes

C12.3c

(C12.3c) Enter the details of those trade associations that are likely to take a position on climate change legislation.

Trade association

Sump and Sewage Pump Manufacturers Association

Is your position on climate change consistent with theirs?

Consistent

Please explain the trade association’s position

The Sump and Sewage Pump Manufacturers Association’s mission is to represent the industry in a manner consistent with the highest standards of business practice and its obligations under law and regulation, by educating the industry, general public, and legislative and regulatory groups, in the proper application, use, installation, and maintenance of the products and services offered by its members. Although we are not aware of a SSPMA Climate Change Policy, the Association’s focus on proper application, use, installation and maintenance of pumps would result in fewer GHG emissions from our customers in the use phase of our products. Therefore, this statement aligns with our desire to reduce GHG emissions for our customers by providing the most energy efficient equipment to our customers.

How have you influenced, or are you attempting to influence their position?

William Gell, of Xylem, is on the board of directors.

C12.3d

(C12.3d) Do you publicly disclose a list of all research organizations that you fund?

Yes

C12.3e

(C12.3e) Provide details of the other engagement activities that you undertake.

Xylem is a member of the Hydraulic Institute (HI) – the largest association of pump industry manufacturers in North America. The Institute offers a wide variety of programs and services, each tailored to member needs: standards development, networking opportunities, access to specific statistical data and economic reports, electronic services, educational materials, breaking industry news, participation in industry initiatives, and more.

Xylem has long-standing partnerships with many non-governmental organizations and government agencies, including the International Water Association, National Association of Environmental Management (NAEM), Ceres, Stockholm International Water Institute, UN Global Compact, Water Environment Federation and Singapore's Public Utilities Board, to name a few.

Xylem has also been a member of the UN Global Compact since 2002 and has committed to the UN Global Compact's 10 universally accepted principles which include a set of core values in the environmental area which encompass our approach to addressing climate change. In 2015, we finalized our Climate Change Policy, which outlines our commitment to develop mitigation and adaptation solutions to the water-related challenges associated with climate change through our products, operations, corporate citizenship and social investment, and stakeholder engagement. We joined the CEO Water Mandate program in 2017.

On World Water Day 2014, Xylem joined the US Water Partnership, which seeks to mobilize U.S.-based knowledge, expertise and resources to improve water security around the world, particularly in those countries most in need. The US Water Partnership views water as the catalyst for development – from global health to climate change, and food security to economic development. Like Xylem, the US Water Partnership is committed to solving water-related climate change challenges.

For more than eight years, in more than 22 countries across five continents, we have worked successfully with six global non-profit partners through our corporate citizenship and social investment program, Xylem Watermark. In 2018, more than 7,500 of Xylem's employee base volunteered in 39 countries, participated in over 730 events, and logged 1,875 employee disaster response hours, working with local non-profit organizations committed to water-related issues in their communities.

Xylem Watermark solutions are sustainable and collaborative, combining community-based efforts with regular monitoring to ensure projects meet local water needs for years to come.

In 2016, Xylem co-convoked the "Disruptive Resilience: Chief Technology Officers (CTOs) Map America 2030 Water Future" conference along with other national leaders in the water sector. This gathering facilitated a discussion of how to best leverage breakthrough technologies advances to transform how the nation's water

resources are managed in order to create a secure water future for the next century.

Xylem was also invited to participate in the White House Water Summit, which focused on the role of breakthrough, creative solutions to current water challenges, as well as the innovative strategies that will catalyze change in how we use, conserve, protect, and think about water in the future.

Albert Cho, Xylem's Vice President of Strategy and Business Development, spoke on a panel at the 2016 American Water Summit. Cho, along with other business and water leaders, discussed the future of the digital utility. Collaborating with other industry leaders at forums like the American Water Summit helps us ensure that

the water sector can maximize the benefits of the digital future.

At the IWA World Water Congress & Exhibition in Brisbane, Australia, Xylem explored the importance of understanding life-cycle costs when evaluating water infrastructure investments.

Xylem co-sponsored the U.S. Bureau of Reclamation Arsenic Sensor Challenge, which is seeking to identify new or improved sensors, devices or test kits to measure arsenic in water in natural and engineered systems.

For the 20th consecutive year, Xylem served as the Founding Sponsor of the Stockholm Junior Water Prize international competition.

Xylem was featured in the Business Roundtable 2016 Sustainability Report as one of 150 companies committed to addressing environmental and energy challenges while driving increased economic growth and job creation.

C12.3f

(C12.3f) What processes do you have in place to ensure that all of your direct and indirect activities that influence policy are consistent with your overall climate change strategy?

People around the globe depend on us to create extraordinary solutions to meet life's most critical water needs. Xylem optimizes water access and quality, and we promote responsible consumption so that communities across the globe can thrive.

Our Environmental, Social and Governance (ESG) Committee is composed of representatives from multiple geographies, businesses and functions and is under the executive sponsorship of the SVP, General Counsel and Corporate Secretary, the SVP, Chief Marketing Officer and the SVP, Chief Supply Chain Officer. The committee meets on a monthly basis. The objectives of the ESG Committee include but are not limited to:

- Identifying and evaluating emerging strategic sustainability issues, considering: regulatory and legislative developments, NGO stakeholder input, market opportunities, brand/reputation, customers and others, as appropriate
- Coordinating company responses to strategic public policy and regulatory issues
- Establishing Xylem's sustainability goals and objectives
- Developing action plans and associated programs
- Reviewing enterprise-wide sustainability programs and performance, and providing input to the Senior Leadership Team for establishing/modifying the company's goals and objectives

We have established targets related to climate change that impact our products, operations, employees and stakeholder engagement. We will continue to track our progress against these goals and publicly report our success. We continue to look for energy efficiency improvements in our products, set ambitious goals to reduce GHG emissions and increase our resource efficiency. Our corporate citizenship program, Xylem Watermark, informs our employee's perspectives on sustainability through first-hand experiences bringing clean water, sanitation and hygiene education to communities in need, drawing the connection between climate change and water issues. In addition, we work closely with partners to drive collective action. Xylem is focused on our commitment to sustainability and to the United Nations Sustainable Development Goals, a framework of global commitments to create a fairer and more sustainable world by 2030.

To advance SDG 6 Clean Water and Sanitation, we will:

- Develop and launch innovative solutions that help solve water issues for millions of people in need. We will provide humanitarian aid by delivering clean water drinking systems and disaster response to communities facing severe water challenges.
- Help communities reduce water contamination by leveraging digital technologies to prevent polluted water from flooding communities or entering local waterways.
- Leverage digital technologies to help reduce water losses from broken infrastructure, faulty meters or unauthorized use (non-revenue water), making water more accessible and affordable for all.
- Help utilities and businesses leverage water reuse solutions that help communities build resilience, facilitating water continuity in the face of severe weather patterns from climate change.
- Foster the adoption of integrated digital solutions by utilities that advance holistic watershed management and create water, energy and cost efficiencies.
- Help communities reduce water contamination that threatens human health by leveraging digital technologies to prevent polluted water from flooding communities or entering local waterways.
- Help convene a global conversation among water stakeholders and advance technologies and practices that foster creative collaboration to solve water.
- Provide innovative drinking water and wastewater and stormwater solutions that enable utilities to deliver major water, energy and cost efficiencies, advancing the health and safety of their communities and broader watersheds.

To advance SDG 13 Climate Action, we will:

- Help more utilities and businesses leverage technologies to build resilience.
- Leverage leading edge technologies to increase the resilience of water infrastructure to help mitigate the impact of severe weather patterns due to climate change by helping communities prepare, respond and react.
- Advance the conversation about water innovation and its powerful opportunities within the water sector and across the business and public domains.

To advance SDG 17 Partnerships for the Goals, we will:

- Develop and launch innovative solutions that help solve water issues for millions of people living in extreme poverty.
- Leverage creative partnerships and harness the power of professional sports to engage global audiences, with a focus on inspiring the next generation of water stewards.

Our commitment to the UN Global Compact's 10 Principles also serves as a guide to act responsibly. Our 2015 Climate Change Policy statement codifies consistency in our stakeholder engagement practices across stakeholder groups. The Policy also serves as a means to share our goals and progress and align our actions with our commitment to address the challenges associated with the "water-climate nexus."

SC. Supply chain module

SC0.0

(SC0.0) If you would like to do so, please provide a separate introduction to this module.

Xylem's mission is to solve water. Xylem's vision and values provide its foundation for growth and inspire Xylem to behave as a responsible industry leader and corporate citizen:

- Respect for internationally proclaimed human rights and working conditions, and for the environment
- Responsibility for how our activities, products and services affect people and the environment
- Integrity for acting ethically and living up to our Code of Conduct
- Creativity to develop innovative energy and water efficient solutions

Xylem was named the Water Technology Company of the Year at the 2018 Global Water Awards. The accolade was presented to the company that made the most significant contribution to the field of water technology in 2017.

Xylem was recognized for "its unparalleled vision to offer end-to-end solutions for the digital utility of the 21st century." Through strategic acquisitions and cutting-edge innovations centered on energy management and process optimization, Xylem has established itself as a leading provider of intelligent solutions that address the water industry's most persistent challenges. Xylem was identified as the company that "moved the needle in the water technology sector in 2017...to become an outright leader in the rapidly growing market for smart water solutions."

"We are honored to be recognized as Water Technology Company of the Year," said Patrick Decker, Xylem President and Chief Executive Officer. "This award is an important acknowledgement of the efforts of our nearly 17,000 Xylem colleagues who are committed to tackling the most complex water management challenges facing communities today. We remain focused on collaborating with our customers and partners to bring the right technology solutions to the market to increase the productivity of water and wastewater operations, and to help utilities address the issue of water affordability."

Xylem's recent acquisitions of Pure Technologies, EmNet and Valor Water Analytics were each noted for strengthening the Company's suite of solutions to address non-revenue water, as well as smart water and wastewater network assessment and management. Other achievements highlighted include the installation of Xylem's Concertor intelligent wastewater pumping system in Washington, D.C., and the launch of Xylem's latest smart dewatering pump. Also acknowledged were Xylem's continued efforts to develop potable reuse solutions with the installation of the world's first large-scale ultraviolet /chlorine process to treat wastewater to drinking water standards at the Terminal Island Water Reclamation Plant in Los Angeles in 2017.

Please see the [Xylem Website](#) for more information about our company.

SC0.1

Allocation method

Allocation based on the market value of products purchased

Please explain how you have identified the GHG source, including major limitations to this process and assumptions made

We use the economic allocation method to allocate emissions to each of our customers. We realize that there is a limitation to our estimation model, given the fact that the intensity of greenhouse gas emissions can vary by customer depending on type of services provided, geographic location, and in some cases, specific customer requirements; however, we have determined that sales dollars is the most straight forward proxy, the margin of error for large customers is likely to be small and the data is easy for our customers to cross check and validate. As reported in our 2020 CDP Investor Response, 2019 Scope 1 and 2 emissions for Xylem amount to 42,471 (Scope1) and 50,127 (Scope 2) metric tons CO2e. Our 2019 Annual Report states total (global) 2019 revenues for Xylem as \$5,249,000,000. Next, we identified spend for each customer, in order to allocate emissions based on the market value of services purchased as a proportion of total 2019 revenues for those markets. We used the following formula for our allocation: Emissions by customer, metric tons CO2e = [Market Value of Services Purchased in 2019 \$US / Xylem 2019 Revenues \$US] x Xylem 2019 Emissions (Scope 1 and 2), metric tons CO2e Where; Xylem 2019 Revenues = \$5,249,000,000 Xylem 2019 Emissions (Scope 1 and 2) = 92,598 metric tons CO2e Market Value of Services Purchased in 2019 = \$[varies by customer]. The main sources of uncertainty for these calculations is extrapolation in cases where data sets were incomplete and the assumption that all customers use similar or average services. We estimate the uncertainty to be +/- 20%.

SC1.2**(SC1.2) Where published information has been used in completing SC1.1, please provide a reference(s).**<https://xyleminc.gcs-web.com/node/14421/html>**SC1.3**

(SC1.3) What are the challenges in allocating emissions to different customers, and what would help you to overcome these challenges?

Allocation challenges	Please explain what would help you overcome these challenges
Diversity of product lines makes accurately accounting for each product/product line cost ineffective	The ability to identify emissions by businesses (Water Infrastructure, Applied Water and Measurement & Control Solutions) will help us overcome these challenges and will enable us to allocate emissions to customers based on the products and services they use and the geographic locations they operate in. Determining the specific carbon intensity of individuals is a challenge. Today, we use the economic allocation method based on customer spend. We realize that this is a limitation to our estimation model, given the fact that the intensity of greenhouse gas emissions vary by customer depending on type of products purchased, services provided, geographic location, and in certain cases, specific customer requirements. Currently, we do not have enough information to evaluate and compare the specific carbon intensities of our different businesses, product categories and geographic locations.

SC1.4

(SC1.4) Do you plan to develop your capabilities to allocate emissions to your customers in the future?

Yes

SC1.4a

(SC1.4a) Describe how you plan to develop your capabilities.

Xylem has a culture of continuous improvement - improving efficiency, service quality and being able to help customers meet their environmental goals. We are constantly working on improvements to our overall GHG management programs. In the future, we plan to account for environmental impacts based on our businesses and products. For example, new products developed in Transport are bringing an average 0.2 percent average energy-efficiency improvement per year, leading to cumulative savings of 280,000 metric tons of CO2 equivalent between 2019 and 2025.

When we are able to account for the GHG footprint of each business and product category, we will also be able to more accurately allocate emissions to customers based on the products and services they use. We believe that improved understanding of the carbon intensity of our businesses and product categories will lead to better opportunities for collaboration on mitigation, and ultimately a better customer experience.

SC2.1

(SC2.1) Please propose any mutually beneficial climate-related projects you could collaborate on with specific CDP Supply Chain members.

Requesting member

National Grid PLC

Group type of project

Change to provision of goods and services

Type of project

Other, please specify (recycled/renewable packaging materials)

Emissions targeted

Actions that would reduce our own supply chain emissions (our own scope 3)

Estimated timeframe for carbon reductions to be realized

0-1 year

Estimated lifetime CO2e savings

500

Estimated payback

3-5 years

Details of proposal

Take our current goal of "Ensure packaging material consists of 75% reusable, recyclable or compostable content" from 75% to 100%; which would also support our "Achieve zero waste to landfill from processes at our major facilities" goal (embedded Scope 3 emissions would lower).
